BE SCHEME & SYLLABUS

Second Year (III and IV Semester)

With effect from 2022-23

Electrical and Electronics Engineering

ST JOSEPH ENGINEERING COLLEGE

AN AUTONOMOUS INSTITUTION Vamanjoor, Mangaluru - 575028

Service & Excellence

VISION

To be a global premier Institution of professional education and research.

MISSION

- Provide opportunities to deserving students of all communities, the Christian students in particular for quality professional education.
- Design and deliver curricula to meet the national and global changing needs through student-centric learning methodologies.
- Attract, nurture and retain the best faculty and technical manpower.
- Consolidate the state-of-art infrastructure and equipment for teaching and research activities.
- Promote all round personality development of the students through interaction with alumni, academia and industry.
- Strengthen the Educational Social Responsibilities (ESR) of the institution.

ST JOSEPH ENGINEERING COLLEGE

An Autonomous Institution Vamanjoor, Mangaluru - 575028

Affiliated to VTU – Belagavi & Recognized by AICTE New Delhi NBA – Accredited: B.E. (CSE, ECE, EEE, ME and CIV) & MBA NAAC – Accredited with A+

> **B.E. SCHEME & SYLLABUS** (With effect from 2022-23)

Electrical & Electronics Engineering

SECOND YEAR

(III and IV Semester)

AUTONOMY AND ACCREDITATION

St Joseph Engineering College (SJEC) is an Autonomous Institute under Visvesvaraya Technological University (VTU), Belagavi, Karnataka State, and is recognized by the All-India Council for Technical Education (AICTE), New Delhi. SJEC is registered under the trust "Diocese of Mangalore, Social Action Department".

The SJEC has been conferred Fresh Autonomous Status from the Academic Year 2021-22. The college was granted autonomy by the University Grants Commission (UGC) under the UGC Scheme for Autonomous Colleges 2018 and conferred by VTU. The UGC Expert Team had visited the college on 28-29 November 2021 and rigorously assessed the college on multiple parameters. The fact that only a handful of engineering colleges in the state have attained Autonomous Status adds to the college's credibility that has been on a constant upswing. Autonomy will make it convenient for the college to design curricula by recognizing the needs of the industry, offering elective courses of choice and conducting the continuous assessment of its students.

At SJEC, the Outcome-Based Education (OBE) system has been implemented since 2011. Owing to OBE practised at the college, SJEC has already been accredited by the National Board of Accreditation (NBA). Five of the UG programs, namely Computer Science & Engineering, Mechanical Engineering, Electronics and Communication Engineering, Electrical & Electronics Engineering and Civil Engineering and MBA programs, have accreditation from the NBA.

Also, SJEC has been awarded the prestigious A+ grade by the National Assessment and Accreditation Council (NAAC) for five years. With a Cumulative Grade Point Average (CGPA) of 3.39 on a 4-point scale, SJEC has joined the elite list of colleges accredited with an A+ grade by NAAC in its first cycle. The fact that only a small percentage of the Higher Education Institutions in India have bagged A+ or higher grades by NAAC adds to the college's credibility that has been on a constant upswing.

The college is committed to offering quality education to all its students, and the accreditation by NAAC and NBA reassures this fact. True to its motto of "Service and Excellence", the college's hard work has resulted in getting this recognition, which has endorsed the academic framework and policies that the college has been practicing since its inception. The college has been leveraging a flexible choice-based academic model that gives students the freedom to undergo learning in respective disciplines and a transparent and continuous evaluation process that helps in their holistic development.

ABOUT THE DEPARTMENT

The Department of Electrical & Electronics Engineering (EEE) was established in the year 2002. The Department has a team of well qualified and dedicated faculty with wide range of specialization. The BE programme offers a unique mix of electrical, electronics and computer related courses enabling the students to take up a professional career/higher studies in any of these areas. Subjects on Electric Circuit Analysis, Control Systems, EV Technologies, Protection and Power Systems, Electric Power Generation, Transmission and Distribution give the basic exposure to electrical fundamentals, whereas Analog and Digital Electronics, Microcontrollers, Digital Signal Processing, Embedded Systems, Hardware Description Languages(HDL), Advanced CMOS VLSI Design, Advanced Programming Languages make attractive blend of Electrical & Electronics Engineering concepts thereby creating excellent placement opportunities in various fields such as Construction, Power Distribution, Automobile, Aeronautical, Information Technology, Healthcare sectors, Semiconductor Device Design and Fabrication. The students of EEE branch are placed in Electrical & Electronics Engineering related Organizations and Software Companies. With the objective of making graduates Industry ready, Computer labs with modern Software and Hardware labs on Transformers, Motors, Power System Protective Relays, Power Electronics and Drive Systems have been operational and have helped students to improve their Technical Knowledge and Skills. The Department of Electrical & Electronics Engineering at SJEC is one of the few Departments in the region to secure NBA Accreditation since 2013.

DEPARTMENT VISION

Excel in Electrical Engineering Education and Research

DEPARTMENT MISSION

- Provide and maintain an environment designed to ensure quality Electrical Engineering Education.
- Design and deliver add-on curricula to existing syllabus to ensure compatibility with National and Global needs.
- Provide Holistic Personality Development of the students through interaction with Industry, Academia and Alumni.
- Consolidate state-of-art laboratories for Teaching and Research Activities.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- **1.** To develop necessary skills in students for successful careers through rigorous education and appreciation for the life-long learning needed to maintain competency.
- **2.** To provide students with the solid foundation in mathematical, scientific and electrical engineering to analyze data and extract relevant information for application to product design and pursue higher education.
- **3.** To train students with good scientific and engineering breadth, including proficiency in software language and use of latest software tools so as to comprehend, analyze, design and create novel products and solutions to current problems.
- **4.** To inculcate in students professional and ethical attitude, effective communication skills, teamwork skills, multidisciplinary approach, and an ability to relate engineering issues to broader social context.

PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and engineering specialization to the solution of complex engineering problems.

2. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. Conduct investigations on complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and the synthesis of information to provide valid conclusions.

5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and a leader in a team, to manage projects and in multidisciplinary environments.

12. Life-long learning: Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

Electrical & Electronics Engineering Graduates will be able to:

PSO1: Make use of modern simulation software & hardware tools and techniques to analyze, present and solve Electrical Engineering problems.

PSO2: Develop entrepreneurial skills through Industry-Institute interactions by activities related to personality development and financial management.

(qualitative analysis only)	connection, CASCODE connect	ion, Darnington	connection
Feedback Amplifiers: Concept of	f feedback feedback connection typ	es general chara	cteristics of
negative feedback amplifiers. In	put and output resistance with fee	edback of variou	s feedback
amplifiers, practical feedback amp	lifier circuits.		5 Teedbuck
Module-4 Power Amplifiers & C	Dscillators		8 hours
Power Amplifiers : Classification	of power amplifiers, Analysis of c	lass A, Class B, o	class C and
Class AB amplifiers, Distortion i	n power amplifiers, harmonic disto	ortion in Class B	amplifiers,
cross over distortion and eliminati	on of cross over distortion.		
Oscillators : Concept of positive f	eedback, frequency of oscillation for	or RC phase oscil	lator, Wien
Bridge oscillator, Tuned oscillator	circuits, Hartley oscillator, Colpitt'	s oscillator, crysta	al oscillator
and its types.			0.1
Module-5 FETs		1 /	8 hours
Construction, working and characterized MOS	cteristics of JFE1 and MOSFE1 (enhancement and	Depletion
divider bigging Analysis and dosi	rE1. Fixed bias configuration, self	onfiguration with	fixed him)
and MOSEET amplifiers	gil of JTET (only common source of	oninguration with	lixeu blas)
and WOST LT amplifiers.			
	PRACTICAL MODULE		
1. Simulation and verification of	series, shunt and double ended clip	per circuits.	
2. Simulation and verification of	clamper circuits.		
3. Design, simulation and Testin	g of Full wave - centre tapped trans	sformer type and I	Bridge type
rectifier circuits with and wit	hout Capacitor filter. Determination	n of ripple factor	, regulation

- 4. Determination of h parameters for CE, CB and CC modes using transistor static characteristics.
- 5. Frequency response of single stage BJT RC coupled amplifier and determination of half power points, bandwidth, input and output impedances.
- 6. Design and testing of BJT -RC phase shift oscillator for given frequency of oscillation.
- 7. Design, simulation and testing of Wien bridge oscillator for given frequency of oscillation.

- 8. Design and testing of Hartley and Colpitt's oscillator for given frequency of oscillation.
- 9. Determination of gain, input and output impedance of BJT Darlington emitter follower with and without bootstrapping.
- 10. Design and testing of Class A and Class B power amplifier and to determine conversion efficiency.

Course Outco	omes: At the end of the course the student will be able to:
22EEE32.1	Design and analyze the biasing circuits for transistor amplifiers, field effect transistors and MOSFET amplifiers.
22EEE32.2	Design and analyze the power amplifier circuits and oscillator circuits for different range of frequencies.
22EEE32.3	Demonstrate the knowledge of transistor amplifiers, feedback amplifier circuits for sustainable development of real time applications.
22EEE32.4	Communicate effectively to estimate the response of diode application circuits and transistor switching circuits.
22EEE32.5	Communicate effectively to estimate the response of transistor amplifiers, field effect transistors and MOSFET amplifiers.
22EEE32.6	Simulate electronic circuits based on amplifiers using modern software tools.

Course Learning Objectives: T	he objective of the course is to	·					
• To apply the basic laws and n	etwork theorems to analyse electrica	al circuits.					
• To analyse series and parallel	resonance circuits.						
• To understand the behaviour of	of switching transients in electric cir	cuits.					
• To impart basic knowledge or	n network analysis using Laplace tra	insforms.					
• To determine the parameters of	of two port networks.						
To simulate electric circuits as	nd verify theoretical results.						
Module-1 Basic Concepts of circ	uit analysis		8 hours				
Concept of ideal and practical sour	rces. Concept of Super-Mesh and S	uper node analys	is. Analysis				
of networks by (i) Network reduct	ion method including star – delta tr	ansformation, (ii) Mesh and				
Node voltage methods for AC and	DC circuits with independent and d	lependent sources	8.				
Module-2 Network Theorems			8 hours				
Super Position theorem, Reciproc	ity theorem, Thevenin's theorem, N	Jorton's theorem,	, Maximum				
power transfer theorem and Mil	lman's theorem. Analysis of r	networks, with a	nd without				
dependent AC and DC sources							
Module-3 Resonant circuits & T	Fransient Analysis		8 hours				
Analysis of simple series RLC and	parallel RLC circuits under resonar	ices. Problems or	n Resonant				
frequency, Bandwidth and Quality	factor at resonance						
Transient analysis of RL and RC c	ircuits under DC excitations: Behav	vior of circuit eler	nents under				
switching action, Evaluation of ini	tial conditions						
Module-4 Laplace Transformati	on		8 hours				
Introduction to Laplace transform	ation (LT), LT of Impulse, Step, R	amp, Sinusoidal	signals and				
shifted functions. Waveform synth	esis. Initial and Final value theorems	s. Transfer function	on and Pole-				
zero Diagram. Solutions of networ	ks using LT.						
Module-5 Two Port Networks			8 hours				
Definition, Open circuit impedar	nce, Short circuit admittance, h-pa	arameters and Tr	ransmission				
parameters and their evaluation for	r simple circuits, relationships betwee	een parameter set	S.				
	PRACTICAL MODULE						
1. Study of the effect of open and	d Short circuits in simple circuits.						
2. Determination of resonant frequency, bandwidth, and Q of a series circuit.							
3. Determination of resonant frequency, bandwidth, and Q of a parallel circuit.							
4. Verification of Thevenin's the	corem						
5. Verification of Norton's theorem							
o. verification of Superposition	ineorem.						
7. Verification of maximum Pow	er uanster meorem.						
 o. Power factor correction. O. Monouroment of time constant 	of an PC aircuit						
7. Ivieasurement of time constant							

10. Measurement of power in three phase Circuits using two watt meter method.

Course Outcomes: At the end of the course the student will be able to:22EEE33.1Solve complex electric circuits using basic concepts of network theory.22EEE33.2Solve complex electric circuits using network theorems.22EEE33.3Analyse the resonance and transient behaviour of electric circuit.

22EEE33.4	Analyze electric circuit using Laplace transformation.
22EEE33.5	Demonstrate the use of two port network parameters.
22EEE33.6	Simulate electric circuit using modern software tools.

• Understan	d the concepts of tra	instormers and their analysis.	lar operation			
 Suggest a Understand 	d the concepts of ge	nerator and to evaluate their perform	nar operation.			
 Explain th 	e requirement for the	e parallel operation of transformers a	nd synchronous g	generators.		
Module-1 Sin	gle & Three Phase	Transformers	2 X	8 hours		
Woulde-T single & Three Thase TransformersOthersOperation of practical transformer under no-load and on-load with phasor diagrams. Open circuit and Short circuit tests, calculation of equivalent circuit parameters and predetermination of efficiency-commercial and all-day efficiency. Voltage regulation and its significance.Introduction of Three-phase Transformers, Constructional features of three-phase transformers. Choice betweensingle unit three-phase transformer and a bank of three single-phase transformers. Transformer connection for three phase operation- star/star, star/delta and V/V, comparative features. Phase conversion-Scott connection for three-phase to two-phase conversion. Labeling of three-phase transformer terminalsSelf-Study: Three-Winding Transformers & Cooling of Transformers: Module-2 Test on Transformers & Autotransformers8 hoursPolarity test, Sumpner's test, separation of hysteresis and eddy current losses, Necessity of Parallel operation, conditions for parallel operation- Singlephase and three phase. Load sharing in case of similar and dissimilar transformers						
Self-Study: Ta	autotransformer-co ap changing transf	opper economy. ormers: On load tap changing trans	formers.			
Module-3 DC	& Synchronous G	enerators		8 hours		
Armature reac Armature wind Synchronous r	tion, Commutation a lings, winding facto eactance, Equivalen	and associated problems related to D rs, e.m.f equation. Harmonics–cause t circuit related to synchronous gene	C generators. es, reduction and e erators.	elimination.		
Module-4 Ana	alysis of Synchrono	ous Generators		8 hours		
Alternator on circuit and sho reactance, Vol	load. Excitation co ort circuit character tage regulation by E	ontrol for constant terminal voltage istics, Assessment of reactance-sho EMF, MMF and ZPF.	e. Voltage regula rt circuit ratio, s	ation. Open ynchronous		
Module-5 Per	formance of Synch	ronous Generators		8 hours		
Effects of saliency, Parallel operation of salient pole synchronous generators and load sharing. Methods of Synchronization, Synchronizing power, Determination of $X_d \& X_q$ – slip test Power angle characteristic (power angle equation for salient and non-salient pole), Capability curve for large turbo generators. Hunting and damper windings.						
Course Outcomes: At the end of the course the student will be able to:						
22EEE34.1	Design a solution	using transformers for distribution s	ubstations.			
22EEE34.2	Design a solution generating station.	to install a three phase Alternat	tor for a low p	ower hydel		
22EEE34.3	Analyze the performental com	rmance parameters of transformers straints near distribution substations	s to evaluate the s.	safety and		
22EEE34.4	Analyze the perference environmental con	ormance parameters of generators straints near low power hydel gener	to evaluate the rating station.	safety and		

22EEE34.5	Demonstrate knowledge of transformers and generator operation, working in a team for commissioning /maintenance of low power hydel generating station.
22EEE34.6	Develop entrepreneurial skills in commissioning/maintenance of transformers and generators in low power hydel generating station.

Electric Power Generation and Economics						
Course Code	22EEE351	CIE Marks	50			
Course Type		SEE Marks	50			
(Theory/Practical/Integrated)	Theory	Total Marks	100			
Teaching Hours/Week (L:T:P)	3:0:0	SEE Hours	03			
Total Hours	40 Hours	Credits	03			
Course Learning Objectives: T	he objective of the course is to					
• Understand the basics of hy	droelectric power plant, merits and	demerits of hydr	roelectric			
power plants, site selection, a	arrangement and elements of hydroe	lectric plant.				
• Understand the working, site	e selection and arrangement of Stea	m, Diesel and G	as Power			
Plants.	C C					
• Understand the working, site	selection and arrangement of Nucle	ar Power Plants.				
• Understand importance of d	lifferent equipments in substation,	Interconnection	of power			
stations and different types o	f grounding.					
Understand the economics of	f power generation.					
Module-1 Hydroelectric Power	Plants		8 hours			
Hydrology, run off and stream f	low, hydrograph, flow duration cu	urve, Mass curve	e, reservoir			
capacity, dam storage. Hydrologi	cal cycle, merits and demerits of	hydroelectric po	wer plants,			
Selection of site. General arranger	ment of hydel plant, elements of the	e plant, Classifica	ation of the			
plants based on water flow regula	tion, water head and type of load th	e plant has to sup	oply. Water			
turbines – Pelton wheel, Francis,	Kaplan and propeller turbines. Cha	racteristic of war	ter turbines			
Governing of turbines, selection o	f water turbines. Underground, smal	ll hydro and pum	ped storage			
plants. Choice of size and number	of units, plant layout and auxiliaries	3				
Module-2 Steam, Diesel, Gas Tu	rbine Power Plants		8 hours			
Introduction to Steam Power Pla	nt, Efficiency of steam plants, Me	rits and demerits	s of plants,			
selection of site. Working of steam	plant, Power plant equipment and l	ayout, Steam turk	oines, Fuels			
and fuel handling, Fuel combust	ion and combustion equipment, C	Coal burners, Flu	idized bed			
combustion, Combustion control,	Ash handling, Dust collection, Dr	aught systems, H	Feed water,			
Steam power plant controls, plant	auxiliaries.					
Introduction to Diesel Power Plant	, Merits and demerits, selection of s	ite, elements of d	iesel power			
plant, applications.		–				
Introduction to Gas Turbine Pow	er Plant, Merits and demerits, sele	ection of site, Fu	els for gas			
turbines, Elements of simple gas to	urbine power plant, Methods of imp	roving thermal ef	fficiency of			
a simple gas power plant, Closed	cycle gas turbine power plants. Con	nparison of gas p	power plant			
with steam and diesel power plants	S		0.1			
Module-3 Nuclear Power Plants			8 hours			
Introduction, Economics of nuclea	r plants, Merits and demerits, select	ion of site, Nucle	ar reaction,			
Nuclear fission process, Nuclear c	hain reaction, Nuclear energy, Nucl	lear fuels, Nuclea	ar plant and			
layout, Nuclear reactor and its cor	trol, Classification of reactors, pow	er reactors in use	, Effects of			
nuclear plants, Disposal of nuclear	waste and effluent, shielding.	_				
Module-4 Substations & Ground	ling		8 hours			
Introduction to Substation equipm	nent; Transformers, High Voltage I	Fuses, High Volt	age Circuit			
Breakers and Protective Relaying	High Voltage Disconnect Switche	s, Lightning Arre	esters, High			
Voltage Insulators and Conductor	s, Voltage Regulators, Storage Bat	teries, Reactors,	Capacitors,			
Measuring Instruments, and power line carrier communication equipment. Classification of						
substations - indoor and outdoor, Selection of site for substation, Bus-bar arrangement schemes						
and single line diagrams of subs	tations. Interconnection of power s	stations. Introduc	tion to gas			
insulated substation, Advantages a	nd economics of Gas insulated subs	tation.				
Introduction to Grounding, Diff	erence between grounded and up	ngrounded syste	m. System			
grounding – ungrounded, solid g	rounding, resistance grounding, rea	actance groundin	g, resonant			
grounding. Earthing transformer. I	Neutral grounding and neutral groun	ding transformer	•			

Module-5 Economics of power generation

Introduction, Effect of variable load on power system, classification of costs, Cost analysis. Interest and Depreciation, Methods of determination of depreciation, Economics of Power generation, different terms considered for power plants and their significance, load sharing. Choice of size and number of generating plants. Tariffs, objective, factors affecting the tariff, types. Types of consumers and their tariff. Power factor, disadvantages, causes, methods of improving power factor, Advantages of improved power factor, economics of power factor improvement and comparison of methods of improving the power factor. Choice of equipment.

Course Outcomes: At the end of the course the student will be able to:							
22EEE351.1	Explain the basics of hydroelectric power plant, merits and demerits of hydroelectric power plants, site selection, arrangement and elements of hydroelectric plant.						
22EEE351.2	Explain the working, site selection and arrangement of Steam, Diesel and Gas Power Plants.						
22EEE351.3	Explain the working, site selection and arrangement of Nuclear Power Plants.						
22EEE351.4	Explain the importance of different equipment's in substation, Interconnection of power stations						
22EEE351.5	Explain the importance of different types of grounding.						
22EEE351.6	Explain the economics of power generation

	Object	Oriented Programming using C-	++						
Course Code		22EEE354	CIE Marks	50					
Course Type		Theory	SEE Marks	50					
(Theory/Practi	cal/Integrated)	Theory	Total Marks	100					
Teaching Hour	rs/Week (L:T:P)	3:0:0	SEE Hours	03					
Total Hours		40 Hours	Credits	03					
Total Hours 40 Hours 05 Course Learning Objectives: The objective of the course is to 0 • Define Encapsulation, Inheritance and Polymorphism. Solve the problem with object oriented approach. • Analyze the problem statement and build object oriented system model. Describe the characters and behavior of the objects that comprise a system. • Explain function overloading, operator overloading and virtual functions. • Discuss the advantages of object oriented programming over procedure oriented programming. Module-1 Beginning with C++ 8 hours What is C++?, Applications and structure of C++ program, Different Data types, Variables, Different Operators, expressions, operator overloading and control structures in C++ . Module-2 Functions, Classes and Objects 8 hours Functions, Inline function, function overloading, friend and virtual functions, Specifying a class, C++ program with a class, arrays within a class, memory allocation to objects, array of objects, members, pointers to members and member functions.									
Module-3 Cons Constructors, M Defining operat	structors, Destructor Iultiple constructor for overloading, O	tors and Operator Overloading s in a class, Copy constructor, Dynar verloading Unary and binary operat	mic constructor, I ors, Manipulatio	8 hours Destructors, n of strings					
using operators.									
Module-4 Inhe	ritance, Pointers,	Virtual Functions, Polymorphism	1	8 hours					
Derived Classes this pointer, Vir	s, Single, multileve tual and pure virtu	el, multiple inheritance, Pointers to al functions	objects and deriv	ved classes,					
Module-5 Strea	ams and Working	with Files		8 hours					
C++ streams a manipulators, C	and stream classe Classes for file strea	s, formatted and unformatted I/0 m operations, opening and closing a	O operations, C a file, EOF	Output with					
Course Outco	mes: At the end of	the course the student will be able	to:						
22EEE354.1	Explain the basics	s of Object-Oriented Programming of	concepts.						
22EEE354.2	Apply the object destructors.	t initialization and destroy conce	ept using constr	ructors and					
22EEE354.3	Apply the concep programs by using Utilize the conce	t of polymorphism to implement co g overloading methods and operator pt of inheritance to reduce the lenge	mpile time polyn s. eth of code and e	norphism in evaluate the					
22EEE354.4	usefulness. Apply the concept	t of run time polymorphism by using	virtual functions	, overriding					
22EEE354.5	functions and abs	tract class in programs.							
22EEE354.6	Utilize I/O operat	ions and file streams in programs.

Biology for Engineers						
Course Code	22BFE37	CIE Marks	50			
Teaching Hours/Week (L:T:P)	(2:0:0)	SEE Marks	50			
Credits	02	Exam Hours	02			
Course Learning Objectives						

Course Learning Objectives:

- 1. To bring awareness of biological concepts to engineering students
- 2. To introduce the building blocks of life and their complexity
- 3. To encourage interdisciplinary studies and projects
- 4. To appreciate the discoveries that mimic nature and its working
- 5. To inculcate nature-inspired design and operational principles

Module-1

Basic Cell Biology: Introduction to Biology, The cell: the basic unit of life, Expression of genetic information-protein structure and function, Cell metabolism; Cells respond to their external environments, Cells grow and reproduce, Cellular differentiation.

Module-2

Biochemistry and Molecular Aspects of Life: Biodiversity-Chemical bonds in Biochemistry; Biochemistry and Human biology, Protein synthesis -DNA; RNA, Transcription and translation factors play key roles in protein synthesis, Differences between eukaryotic and prokaryotic protein synthesis, Stem cells and their applications.

Module-3

Bioinspired Engineering based on human physiology: Circulatory system (artificial heart, pacemaker, stents), Nervous system (Artificial neural network), Respiratory system, sensory system (electronic nose, electronic tongue), Visual and auditory prosthesis (Bionic eye and cochlear implant).

Module-4

Relevance of Biology as an interdisciplinary approach: Biological observation that led to major discoveries, Echolocation (ultrasonography, sonars), Photosynthesis (photovoltaic cells, bionic leaf), Bird flying (aircraft), Lotus leaf effect (Super hydrophobic and self-cleaning surfaces), Plant burrs (Velcro).

Module-5

Bioinspired Algorithms and Applications: Genetic algorithm, Gene expression modelling, Parallel Genetic Programming: Methodology, History, and Application to Real-Life Problems, Dynamic Updating DNA Computing Algorithms, Bee-Hive: New Ideas for Developing Routing Algorithms Inspired by Honey Bee Behaviour.

Course Outcomes: At the end of the course the student will be able to:						
22BFE37.1	Discuss how the cell forms the basic building block of life					
22BFE37.2	Distinguish between transcription and translation					
22BFE37.3	Describe the role played by proteins within the cell					
22BFE37.4	Analyze the role of bioinspired design in novel applications					
22BFE37.5	Apply bioinspired design principles to other domains					
22BFE37.6	Implement a simple genetic algorithm

Industry Oriented Training - Computing Skills								
Course Code		22ITC39B	CIE Marks	50				
Teaching Hour	s/Week (L:T:P)	(0:0:2)	SEE Marks	-				
Credits		-	Exam Hours	02				
Course Learn	ing Objectives:							
1. Use logic	al conditions for	problem-solving and also intro	oduce the concept	s of arrays				
2. Know fur	nctions, function of	calls, and parameter passing						
3. Introduce	algorithms and a	ppreciate their importance in J	problem-solving					
4. Introduce	the core concept	s of OOP's						
5. Differenti database	5. Differentiate between front-end & back-end development and recognize the use of database management							
		Module-1						
Introduction to	computing cons	tructs						
Logical conditions: For Loops, Nested For Loops, While Loops, Do-While Loops, Nesting and Boxes, and combine/negate several logical conditions using logic operations AND, OR, and NOT. Arrays & strings: Create arrays of characters (strings), use the null terminator, and manipulate strings								
		Module-2						
Functions & Po	ointers							
Getting Valid U Value, Walking Pointers to Struc	ser Input, Changi an Array with Po cture.	ng Parameter Values, Pointer pinters, Dynamic Memory All Module-3	Basics, Changing location, Getting	g the Pointed to More Memory, 4 Hours				
Algorithm anal Introduction to Bubble Sort, Sel	ysis Algorithm Anal lection Sort, Inser	ysis, Big-O, Big-O Example tion Sort, Recursion, Recursiv	es, Dynamic Arr ve Binary Search,	ay Operations, Merge Sort.				
				4 Hours				
		Module-4						
Object-oriented Designing for O objects, data ab procedural and o	d programming bject-Oriented Prostraction, encaps bbject-oriented pr	ogramming, Core Concepts o sulation, inheritance, benefits ogramming paradigm.	f OO Programmin of inheritance,	ng: Classes and polymorphism, 4 Hours				
		Module-5						
Frontend and b	oackend develop	ment						
UI, Database ma	anagement: DBM	S overview, Relational Data N	Model and the CR	EATE TABLE				
Statement, Basic	e Query Formulat	ion with SQL.		4 Hours				
Course Outcon	nes: At the end of	the course the student will be	e able to:					
22ITC39B.1	Illustrate the use	of logical conditions, declare	and manipulate c	lata into arrays				
22ITC39B.2	Implement funct	ions, function calls, and parar	neter passing					
22ITC39B.3	Design, implem	ent, and evaluate an algorithm	to meet desired n	leeds				
22ITC39B.4	Describe the cor	e concepts of OOP's						
201TC20D 5	D ' /1	<u> </u>						

Г

22ITC39B.5 Recognize the concepts of front-end development and database management

Module-3 Timer and Serial Port	Programming		8 hours					
Programming 8051 timers in assen 1 in 8051 C.	bly language, Counter programmin	g, Programming t	imers 0 and					
Basics of serial communication, assembly language, serial port pro	8051 connections to RS232, 8051 gramming in C for 8051.	serial port progr	ramming in					
Module-4 Interrupts Programm	ing and Interfacing 8051		8 hours					
8051 interrupts, Programming tim priority in 8051/52, Interrupt progr	er, external hardware, serial comm ramming in C.	unication interrup	ot, Interrupt					
LCD interfacing, Keyboard interfacing. ADC 0808 interfacing to 8051, Serial ADC Max1112 ADC interfacing to 8051, DAC interfacing, Sensor interfacing and signal conditioning.								
Self-learning topics: ADC, DAC Interfacing								
Module-5 Motor Interfacing and 8255 Interfacing 8 hours								
Relays and optocoupler isolators, stepper motor interfacing, DC motor interfacing and PWM. Programming the 8255, 8255 interfacing, C programming for 8255. Self-learning topics : motor interfacing.								
PRACTICAL MODULE 1. Assembly language programs on data transfer, arithmetic and logic operations.								

- 2. Assembly language programs for Conditional call and return instructions.
- 3. Code conversion programs in Assembly language BCD to ASCII, ASCII to BCD, ASCII to decimal, Decimal to ASCII, Hexa decimal to decimal
- 4. Assembly language Programs using serial port and on-chip timer/counters.

- 5. 8051 C program for Stepper motor interface.
- 6. 8051 C program for DC motor interface for speed control using PWM.
- 7. 8051 C program to generate different waveforms: Sine, Square, Triangular, Ramp using DAC interface.
- 8. 8051 C program to interface External ADC

Course Outc	omes: At the end of the course the student will be able to:
22EEE43.1	Outline the 8051 architecture, registers, internal memory organization, addressing
	modes.
22EEE43.2	Discuss 8051 addressing modes, instruction set of 8051, accessing data and I/O port
	programming.
22EEE43.3	Develop 8051C programs for time delay, I/O operations, I/O bit manipulation, logic
	and arithmetic operations, data conversion and timer/counterprogramming.
22EEE43.4	Summarize the basics of serial communication and interrupts, also develop 8051
	programs for serial data communication and interrupt programming.
22EEE43.5	Program 8051 to work with external devices for ADC, DAC, Stepper motor control,
	DC motor control, Elevator control.
22EEE43.6	Use modern software to analyze and implement microcontroller programs.

Electric Motors								
Course Code	22EEE44	CIE Marks	50					
Course Type	Theory	SEE Marks	50					
(Theory/Practical/Integrated)	Theory	Total Marks	100					
Teaching Hours/Week (L:T:P)	3:0:0	SEE Hours	03					
Total Hours	40 Hours	Credits	03					
Course Learning Objectives: T	he objective of the course is to							
• Study the constructional featu	res, operational features of electric	motors.						
• Study different tests to be pe	erformed for the assessment of pe	erformance charac	teristics of					
motors.								
• Study the different speed cont	rol methods for motors							
• Select a suitable drive for spec	cific application.							
• Explain the construction and o	operation of synchronous motor and	l special motors.	0.1					
Module-1 DC Motors	· (*		8 hours					
Classification, Back emf and its sig	gnificance, Torque equation, Charac	teristics of shunt,	series and					
compound motors, Speed control	of shunt, series and motors, DC M	otor starters- 3 pc	bint and 4					
point.	nd condition for maximum offician							
Solf Study: Application of DC M	nd condition for maximum efficien	cy.						
Module-2 Tosting of DC Motors	51018.		8 hours					
Direct and Indirect method of	testing Brake Test Swinburn	e's test Retarda	tion test					
Honkinson's test merits and deme	erits of tests	ie s iest, Retarda	tion test,					
Three Phase Induction Motors:	Construction classification and tx	vnes Slin torque	equation					
slip-torque characteristic coverir	g motoring generating and brak	ing regions of o	operation.					
Maximum torque, significance of	slip.	88	- F					
Self-Study: Generation of rotating	g magnetic field. Principal of operat	tion.						
Module- 3 Performance of Three	e Phase Induction Motor		8 hours					
Phasor diagram on no load and on	load, equivalent circuit, losses, effic	iency, No-load an	d blocked					
rotor test, Performance evaluation	n from circle diagram and equiva	alent circuit. Cog	ging and					
Crawling. High torque rotors- doul	ole cage and deep rotor bars, equival	ent circuit and per	formance					
evaluation of double cage induction	on motor. Induction motor working	as induction gener	rator.					
Self-Study: Application of Induct	ion Generators to renewable energy	sources.						
Module-4 Speed Control of Three	ee Phase Induction Motors		8 hours					
Direct on line, star delta and auto	b transformer starting of three pha	se induction moto	ors. Rotor					
resistance starting. Speed control	of three phase induction motor by v	oltage, frequency	and rotor					
resistance methods.	Double reveluing field theory	nd minsiple of						
Single Phase Induction Motor:	bouble revolving field theory a	nd principle of (peration.					
Solf Study: Application of three p	t phase, capacitor start, capacitor ru	n and shaded pole	motors.					
Sen-Study: Application of three phase and single phase induction motors.								
Principle of operation phasor diag	ram torque and torque angle Blond	el diagram effect	of change					
in load effect of change in excitation. V and inverted V curves. Synchronous condenser, Hunting								
and damping. Methods of starting of Synchronous Motors								
Special Motors : Construction and	operation of Universal Motor. PM	DC, Stepper Moto	or and AC					
Servo motor.	L	/ IF	-					
Self-Study: Application of special	motors							
Course Outcomes: At the end of	the course the student will be able	to.						

22EEE44.1	Analyze the performance characteristics of DC Motors and select a suitable motor
	to provide solutions to the current industrial problems.
22EEE44.2	Outline the constructional features and analyze characteristics of Three Phase
22EEE44.2	Induction Motors and select a suitable motor for the industrial application.

L

22EEE44.3	Describe the constructional features of Single Phase Induction Motors; select a suitable motor for the industrial application.
22EEE44.4	Analyze the operation of Synchronous Motors and applications of the same to address the current industrial issues.
22EEE44.5	Explore various available techniques to test the DC Motors, evaluate the performance and speed control techniques of Three Phase Induction Motors.
22EEE44.6	Describe the constructional features and operation of special purpose motors such as Universal Motors, AC Servomotor and Stepper Motor, application of theses motors to manage multidisciplinary projects.

Course Lear	ning Objectives: T	he objective of the course is to										
• Understand the basics of Linear ICs such as Op-amp, Regulator, Timer & PLL.												
• Learn the	 Learn the designing of various circuits using linear ICs. 											
• Use these	linear ICs for specif	ic applications										
• Understan	d the concept and v	arious types of converters										
• Use these	ICs, in Hardware pr	ojects										
Module-1 Ope	erational amplifier	\$		8 hours								
Introduction, B	lock diagram repres	sentation of a typical Op-amp, sche	matic symbol, cha	aracteristics								
of an Op-am	p, ideal op-amp,	equivalent circuit, ideal voltage	transfer curve,	open loop								
configuration,	differential amplific	er, inverting & non –inverting amp	lifier, Op-amp wi	ith negative								
feedback, vol	tage series feedba	ack amplifier, voltage shunt fe	edback amplifie	r(excluding								
derivations).	-		*	0								
General Linea	r Applications: A.	C. amplifier, summing, scaling & a	veraging amplifie	er, inverting								
and non-invert	ing configuration, In	nstrumentation amplifier.										
Module-2 Filt	ers and DC Voltag	e regulators		8 hours								
First & Second	order high pass &	low pass Butterworth filters. Band	pass filters, all pas	ss filters.								
Voltage regulat	or basics, voltage f	ollower regulator, adjustable output	regulator, LM317	& LM337								
Integrated circui	ts regulators.											
Module-3 Sign	nal Generators, Co	mparators & Converters		8 hours								
Triangular / red	ctangular wave gene	erator, phase shift oscillator, saw to	oth oscillator.									
Basic compara	tor, zero crossing de	etector, inverting & non-inverting S	chmitt trigger circ	uit, voltage								
to current con	verter with ground	ed load, current to voltage conver	ter and basics of	voltage to								
frequency and	frequency to voltag	e converters.										
Module-4 Cor	verters			8 hours								
Precision half	wave & full wave re	ectifiers.										
R-2R D/A Co	nverter, Integrated	circuit 8-bit D/A, successive appro	oximation ADC,	linear ramp								
ADC	о т •			0.1								
Module-5 PLI	A Timers			8 hours								
Basic PLL, cor	nponents, performa	nce factors.										
Internal archite	ecture of 555 timer,	Mono stable multivibrator and app.	lications									
0 0 1												
Course Outco	omes: At the end of	the course the student will be able	to:									
22EEE451 1	Analyze the basic	e architecture and block diagram	representation of	operational								
	amplifiers using li	near applications of IC 741.										
22EEE451.2	Analyze the opera	tion of active filter circuits and DO	C voltage regulato	ors using the								
	principles of opera	ational amplifiers.										
22EEE451.3	Apply the standa	rds of electronic laboratory pract	ices for the usag	ge of signal								
	generators, compa	rators and converters based on data	sheets.									
22EEE451.4	Apply the standa	rds of electronic laboratory pract	ices for the usag	ge of signal								
	processing circuits	s, ADC and DAC based on data she	ets.	.								
22EEE451.5	Recognize the ne	ed for usage of Phase Locked I	Loops, 555 timer	rs and their								
	applications in ope	en ended projects.	1 110	• -								
	1. 1917	tograted airquits based on anarotic	nal amplifiare us	· 1								
22EEE451.6	Simulate linear in	legrated circuits based on operation	mai ampimers us	ing modern

Waya propagation in frag apage	and in dialactrics. Dointing yests	m and narran aan	aidanationa									
Propagation in good conductors	and in districtions. Follitting vector	and power con	sider attolls.									
riopagation in good conductors, s	KIII CITCCI, INUIIICITCAIS.		Propagation in good conductors, skin effect. Numericals.									
Course Outcomes: At the end of	the course the student will be able	to:										

22EEE452.1	Use different coordinate systems, Coulomb's Law and Gauss Law for the
	evaluation of electric fields produced by different charge configurations.
22FFF452 2	Calculate the energy and potential due to a system of charges & Explain the
22151515452,2	behavior of electric field across boundary conditions.

22EEE452.3	Explain the Poisson's, Laplace equations and behavior of steady magnetic fields.
22EEE452.4	Explain the behavior of magnetic fields and magnetic materials.
22EEE452.5	Asses time varying fields and propagation of waves in different media.
22EEE452.6	Generalize the concepts of guided structures like transmission line, means of transporting energy or information, commonly used in power distribution and communication.

Temperature sensors and thermal transducers: Heat and temperature, The bimetallic stri Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers. Module-4 Data Acquisition Systems 8 hour Introduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Transducer	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Piezoelectric Transducers, Sers. Digital Transducers, cry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplification,										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers,Module-3 Sound and Temperature Sensors8 hourSound, infrasound and ultrasound: Principles, Audio electrical sensors and transducerElectrical to audio transducers.Temperature sensors and thermal transducers: Heat and temperature, The bimetallic strict Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers.Module-4 Data Acquisition Systems8 hourIntroduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Types of Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical and electrical amplifiers	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Piezoelectric Transducers, Sers. Digital Transducers, cry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplifiers, Electrical and										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers, Module-3 Sound and Temperature Sensors 8 hour Sound, infrasound and ultrasound: Principles, Audio electrical sensors and transducers Electrical to audio transducers. Temperature sensors and thermal transducers: Heat and temperature, The bimetallic strict Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers. Module-4 Data Acquisition Systems 8 hour Introduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Types of Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical an electronic Amplifiers. Introduction to data acquisition systems Objectives and Configuration of Data Acquisition Systems	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Sers. Digital Transducers, cry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplifiers, Electrical and										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers, Module-3 Sound and Temperature Sensors 8 hour Sound, infrasound and ultrasound: Principles, Audio electrical sensors and transducer. Electrical to audio transducers. Temperature sensors and thermal transducers: Heat and temperature, The bimetallic stri Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers. Module-4 Data Acquisition Systems 8 hour Introduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Types of Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical are electronic Amplifiers. Introduction to data acquisition systems, Objectives and Configuration of Data Acquisition System Data Acquisition Systems, Data Conversion, Data/Signal Transmission	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Sers. Digital Transducers, cry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplifiers, Electrical and Data Acquisition System,										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers, Module-3 Sound and Temperature Sensors 8 hour Sound, infrasound and ultrasound: Principles, Audio electrical sensors and transducer. Electrical to audio transducers. Temperature sensors and thermal transducers: Heat and temperature, The bimetallic stripter transducers. Module-4 Data Acquisition Systems Nodule-4 Data Acquisition Systems Sound Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical are electronic Amplifiers. Introduction to data acquisition systems, Objectives and Configuration of Data Acquisition System Mathews, Data Conversion, Data/Signal Transmission Module-5 Measurement of Non – Electrical Quantities	sensors and transducers, are, The bimetallic strip, transducers, Thermal to bimetallic strip, transducers,										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers, Module-3 Sound and Temperature Sensors 8 hour Sound, infrasound and ultrasound: Principles, Audio electrical sensors and transduce Electrical to audio transducers. Temperature sensors and thermal transducers: Heat and temperature, The bimetallic stript Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers. Module-4 Data Acquisition Systems 8 hour Introduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Types of Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical and electronic Amplifiers. Introduction to data acquisition systems, Objectives and Configuration of Data Acquisition System Data Acquisition Systems, Data Conversion, Data/Signal Transmission Module-5 Measurement of Non – Electrical Quantities	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Sers. Digital Transducers, cry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplifiers, Electrical and Data Acquisition System, 8 hours										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers, Module-3 Sound and Temperature Sensors 8 hour Sound, infrasound and ultrasound: Principles, Audio electrical sensors and transduce Electrical to audio transducers. Temperature sensors and thermal transducers: Heat and temperature, The bimetallic stri Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers. Module-4 Data Acquisition Systems 8 hour Introduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Types of Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical are electronic Amplifiers. Introduction to data acquisition systems, Objectives and Configuration of Data Acquisition System Data Acquisition Systems, Data Conversion, Data/Signal Transmission Module-5 Measurement of Non – Electrical Quantities 8 hour Pressure gauges, low gas pressures, Ionization gauges, Measurement of Displacement 10 bit Medule	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Sers. Digital Transducers, ry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplifiers, Electrical and Data Acquisition System, 8 hours sement of Displacement,										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers, Module-3 Sound and Temperature Sensors 8 hour Sound, infrasound and ultrasound: Principles, Audio electrical sensors and transduce Electrical to audio transducers. Temperature sensors and thermal transducers: Heat and temperature, The bimetallic strit Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers. Module-4 Data Acquisition Systems 8 hour Introduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Types of Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical are electronic Amplifiers. Introduction to data acquisition systems, Objectives and Configuration of Data Acquisition System Data Acquisition Systems, Data Conversion, Data/Signal Transmission Module-5 Measurement of Non – Electrical Quantities 8 hour Pressure gauges, low gas pressures, Ionization gauges, Measurement of Displacement Measurement of Velocity/ Speed, Measurement of Acceleration, Measurement of Liquid Level	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Sers. Digital Transducers, cry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplifiers, Electrical and Data Acquisition System, sement of Displacement, ement of Liquid Level										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers, Module-3 Sound and Temperature Sensors 8 hour Sound, infrasound and ultrasound: Principles, Audio electrical sensors and transduce Electrical to audio transducers. Temperature sensors and thermal transducers: Heat and temperature, The bimetallic stri Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers. Module-4 Data Acquisition Systems 8 hour Introduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Types of Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical au electronic Amplifiers. Introduction to data acquisition systems, Objectives and Configuration of Data Acquisition System Data Acquisition Systems, Data Conversion, Data/Signal Transmission Module-5 Measurement of Non – Electrical Quantities 8 hour Pressure gauges, low gas pressures, Ionization gauges, Measurement of Displacement Measurement of Velocity/ Speed, Measurement of Acceleration, Measurement of Liquid Level	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Sers. Digital Transducers, cry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplifiers, Electrical and Data Acquisition System, 8 hours ement of Displacement, ement of Liquid Level										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers, Module-3 Sound and Temperature Sensors 8 hour Sound, infrasound and ultrasound: Principles, Audio electrical sensors and transduce Electrical to audio transducers. Temperature sensors and thermal transducers: Heat and temperature, The bimetallic stri Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers. Module-4 Data Acquisition Systems 8 hour Introduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Types of Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical are electronic Amplifiers. Introduction to data acquisition systems, Objectives and Configuration of Data Acquisition System Data Acquisition Systems, Data Conversion, Data/Signal Transmission Module-5 Measurement of Non – Electrical Quantities 8 hour Pressure gauges, low gas pressures, Ionization gauges, Measurement of Displacement Measurement of Velocity/ Speed, Measurement of Acceleration, Measurement of Liquid Level Course Outcomes: At the end of the course the student will be able to:	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Sers. Digital Transducers, cry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplifiers, Electrical and Data Acquisition System, 8 hours ement of Displacement, ement of Liquid Level										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers, Module-3 Sound and Temperature Sensors 8 hour Sound, infrasound and ultrasound: Principles, Audio electrical sensors and transduce Electrical to audio transducers. Temperature sensors and thermal transducers: Heat and temperature, The bimetallic stritter Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers. Module-4 Data Acquisition Systems 8 hour Introduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Types of Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical are electronic Amplifiers. Introduction to data acquisition systems, Objectives and Configuration of Data Acquisition System Data Acquisition Systems, Data Conversion, Data/Signal Transmission 8 hour Pressure gauges, low gas pressures, Ionization gauges, Measurement of Displacement Measurement of Velocity/ Speed, Measurement of Acceleration, Measurement of Liquid Level Course Outcomes: At the end of the course the student will be able to: 22EEEE453.1	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Sers. Digital Transducers, cry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplifiers, Electrical and Data Acquisition System, ement of Displacement, ement of Liquid Level ting of various transducers										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers,Module-3 Sound and Temperature Sensors8 hourSound, infrasound and ultrasound: Principles, Audio electrical sensors and transduce Electrical to audio transducers.Temperature sensors and thermal transducers: Heat and temperature, The bimetallic stri Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers.Module-4 Data Acquisition Systems8 hourIntroduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Types of Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical ar electronic Amplifiers.Introduction to data acquisition systems, Objectives and Configuration of Data Acquisition System Data Acquisition Systems, Data Conversion, Data/Signal Transmission8 hourModule-5 Measurement of Non – Electrical Quantities8 hourPressure gauges, low gas pressures, Ionization gauges, Measurement of Liquid LevelCourse Outcomes: At the end of the course the student will be able to:22EEE453.1Discuss need of transducers, their classification and working of various transducers and sensors	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Sers. Digital Transducers, cry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplifiers, Electrical and Data Acquisition System, 8 hours ement of Displacement, ement of Liquid Level										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers,Module-3 Sound and Temperature Sensors8 hourSound, infrasound and ultrasound: Principles, Audio electrical sensors and transduce Electrical to audio transducers.8 hourTemperature sensors and thermal transducers:Heat and temperature, The bimetallic stript Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers.8 hourModule-4 Data Acquisition Systems8 hourIntroduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Types of Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical are electronic Amplifiers.Introduction to data acquisition systems, Objectives and Configuration of Data Acquisition System Data Acquisition Systems, Data Conversion, Data/Signal Transmission8 hourModule-5 Measurement of Non – Electrical Quantities8 hourPressure gauges, low gas pressures, Ionization gauges, Measurement of Displacement Measurement of Velocity/ Speed, Measurement of Acceleration, Measurement of Liquid LevelCourse Outcomes: At the end of the course the student will be able to: 22EEE453.1Discuss need of transducers, their classification and working of various transducer and sensors22EEE453.2Discuss recent trends in sensor technology and their selection.	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Sers. Digital Transducers, cry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplifiers, Electrical and Data Acquisition System, ement of Displacement, ement of Liquid Level ting of various transducers extion.										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers,Module-3 Sound and Temperature Sensors8 hourSound, infrasound and ultrasound: Principles, Audio electrical sensors and transduce Electrical to audio transducers.8 hourTemperature sensors and thermal transducers:Heat and temperature, The bimetallic stripter Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers.8 hourModule-4 Data Acquisition Systems8 hourIntroduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Types of Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical are electronic Amplifiers.Introduction to data acquisition systems, Objectives and Configuration of Data Acquisition System Data Acquisition Systems, Data Conversion, Data/Signal Transmission8 hourModule-5 Measurement of Non – Electrical Quantities8 hourPressure gauges, low gas pressures, Ionization gauges, Measurement of Displacement Measurement of Velocity/ Speed, Measurement of Acceleration, Measurement of Liquid LevelCourse Outcomes: At the end of the course the student will be able to:22EEE453.1Discuss need of transducers, their classification and working of various transducer and sensors22EEE453.2Discuss recent trends in sensor technology and their selection.22EEE453.3Discuss basics of signal conditioning and signal conditioning equipment.	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Sers. Digital Transducers, ry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplifiers, Electrical and Data Acquisition System, 8 hours ement of Displacement, ement of Liquid Level ting of various transducers ection. oning equipment.										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers, Module-3 Sound and Temperature Sensors 8 hour Sound, infrasound and ultrasound: Principles, Audio electrical sensors and transducee Electrical to audio transducers. 8 hour Temperature sensors and thermal transducers: Heat and temperature, The bimetallic stri Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers. 8 hour Module-4 Data Acquisition Systems 8 hour Introduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Types of Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical are electronic Amplifiers. Introduction to data acquisition systems, Objectives and Configuration of Data Acquisition System Data Acquisition Systems, Data Conversion, Data/Signal Transmission Module-5 Measurement of Non – Electrical Quantities 8 hour Pressure gauges, low gas pressures, Ionization gauges, Measurement of Liquid Level Course Outcomes: At the end of the course the student will be able to: 22EEE453.1 Discuss need of transducers, their classification and working of various transducer and sensors 22EEE453.2 Discuss recent trends in sensor technology and their selection. 22EEE453.3 Discuss configuration of Data Acquisition gauges, made acquispression	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Sers. Digital Transducers, cry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplifiers, Electrical and Data Acquisition System, 8 hours ement of Displacement, ement of Liquid Level sing of various transducers extion. oning equipment. lata conversion and data										
Recent Trends – Smart Pressure Transmitters, Selection of Sensors, Rotary – Variable Different Transformer, Synchros and Resolvers, Induction Potentiometers,Module-3Sound and Temperature Sensors8 hourSound, infrasound and ultrasound: Principles, Audio electrical sensors and transducer Electrical to audio transducers.8 hourTemperature sensors and thermal transducers: Heat and temperature, The bimetallic strip Thermocouples, Metal – resistance sensors, Thermistors, Thermal transducers, Thermal electrical transducers.8 hourModule-4 Data Acquisition Systems8 hourIntroduction to signal conditioning, Functions of Signal Conditioning Equipment, Amplification Types of Amplifiers, Mechanical Amplifiers Fluid Amplifiers, Optical Amplifiers, Electrical an electronic Amplifiers.Introduction to data acquisition systems, Objectives and Configuration of Data Acquisition System Data Acquisition Systems, Data Conversion, Data/Signal TransmissionModule-5 Measurement of Non – Electrical Quantities8 hourPressure gauges, low gas pressures, Ionization gauges, Measurement of Liquid LevelCourse Outcomes: At the end of the course the student will be able to:22EEE453.1Discuss need of transducers, their classification and working of various transducer and sensors22EEE453.3Discuss basics of signal conditioning and signal conditioning equipment.22EEE453.4Discuss configuration of Data Acquisition System, data conversion and da transmission	8 hours ges, Strain Gages, Load c Transducers, Resistance Piezoelectric Transducers, Sers. Digital Transducers, cry – Variable Differential 8 hours sensors and transducers, ure, The bimetallic strip, transducers, Thermal to 8 hours quipment, Amplification, Amplifiers, Electrical and Data Acquisition System, 8 hours ement of Displacement, ement of Liquid Level ting of various transducers extion. oning equipment. lata conversion and data										

Sensors and Transducers

22EEE453.6 Write effective report after conducting experiments on characteristics of transducers

Sl. No.	Title of the Book	Name of the Author/s	Name of the Publisher	Edition and Year

Course Articulation Matrix

Electrical Safety Practices										
Course Code		22EEE454	CIE Marks	50						
Course Type		Theory	SEE Marks	50						
(Theory/Practi	cal/Integrated)	Theory	Total Marks	100						
Teaching Hou	rs/Week (L:T:P)	3:0:0	SEE Hours	03						
Total Hours		40 Hours	Credits	03						
Course Learn	ing Objectives: T	he objective of the course is to								
To discuss	the objectives of	safety and security measures, haza	rds associated w	vith electric						
current an	d voltage.	• •								
To discuss	the electrical safety i	measures in residential, commercial and	d agricultural insta	llations.						
Understan	d the preliminary p	reparations, safe sequence and risk	of plant and equi	pment.						
• To analyze the hazardous zones and electrical safety in the hazardous areas										
Understand the application of fire extinguishers.										
Module-1 Elec	trical Safety, Shoc	eks and Their Prevention		8 hours						
Terms and define	nitions, objectives of	of safety and security measures, Haz	ards associated v	with electric						
current and vo	oltage, who is exp	oosed, principles of electrical safe	ety, Approaches	to prevent						
Accidents, scop	e of subject electri	cal safety. Primary and secondary e	lectrical shocks, j	possibilities						
of getting electric due to flesh $/$ Sr	ical shock and its se	tion of shocks, safety proceptions	snocks and its effe	ects, snocks						
shocks burns r	ark over s, preven	s and shop	igainst contact si	IOCKS, Hash						
Module-2 Fle	ctrical Safety in	Besidential Commercial and	Agricultural Ir	stallations						
Nodule-2 Electrical Safety in Residential, Commercial and Agricultural Installations										
o nours Wiring and fitting _Domestic appliances _water tap giving shock _ shock from wet wall _ fap firing										
shock –multi-st	oried building – Ter	morary installations – Agricultural	pump installation	-Do's and						
Don'ts for safet	y in the use of dom	nestic electrical appliances.	r r							
Module 3 Electrical Sofety during Installation										
Module-3 Elec	trical Safety durir	ng Installation		8 hours						
Module-3 Elec	trical Safety durin	ng Installation	safatu documont	8 hours						
Module-3 Elec Preliminary pre	trical Safety durin parations –safe seq	ng Installation uence –risk of plant and equipment –	-safety document	8 hours

Universal Human Values- II									
Course Code	22UHV47	CIE Marks	50						
Teaching Hours/Week (L:T:P)	(2:0:0)	SEE Marks	50						
Credits	02	Exam Hours	02						

Course Learning Objectives:

This introductory course input is intended:

1. To help the students appreciate the essential complementarily between 'VALUES' and 'SKILLS' to ensure sustained happiness and prosperity which are the core aspirations of all human beings.

2. To facilitate the development of a Holistic perspective among students towards life and profession as well as towards happiness and prosperity based on a correct understanding of Human reality and the rest of existence. Such a holistic perspective forms the basis of Universal Human Values and movement toward value-based living in a natural way.

3. To highlight plausible implications of such a Holistic understanding in terms of ethical human conduct, trustful and mutually fulfilling human behavior and mutually enriching interaction with Nature.

Module-1 Introduction to Value Education

Right Understanding, Relationship and Physical Facility (Holistic Development and the Role of Education), Understanding Value Education, Self-exploration as the Process for Value Education, Continuous Happiness and Prosperity – the Basic Human Aspirations, Happiness and Prosperity – Current Scenario, Method to Fulfill the Basic Human Aspirations.

Activities: Sharing about Oneself, Exploring Human Consciousness and Exploring Natural Acceptance. 5 Hours

Module-2 – Harmony in the Human Being

Understanding Human beings as the Co-existence of the Self and the Body, Distinguishing between the Needs of the Self and the Body, The Body as an Instrument of the Self Understanding Harmony in the Self, Harmony of the Self with the Body, Programme to ensure self-regulation and Health.

Activities: Exploring Sources of Imagination in the Self, Exploring Harmony of Self with the Body and Exploring the difference of Needs of Self and Body. **5 hours**

Module 3 – Harmony in the Family and Society

Harmony in the Family – the Basic Unit of Human Interaction, 'Trust' – the Foundational Value in Relationship, 'Respect' – as the Right Evaluation, Other Feelings, Justice in Human-to-Human Relationship, Understanding Harmony in the Society, Vision for the Universal Human Order.

Activities: Exploring the Feeling of Trust, Exploring the Feeling of Respect and Exploring the Feeling systems to fulfil Human Goal. **5 hours**

Module-4 – Harmony in the Nature/Existence

Understanding Harmony in the Nature, Interconnectedness, self-regulation and Mutual Fulfilment among the Four Orders of Nature, Realizing Existence as Co-existence at All Levels, The Holistic Perception of Harmony in Existence.

Activities: Exploring the Four Orders of Nature and Co-existence in Existence.5 hoursModule-5 – Implications of the Holistic Understanding – a Look at Professional Ethics

Natural Acceptance of Human Values, Definitiveness of (Ethical) Human Conduct, A Basis for Humanistic Education, Humanistic Constitution and Universal Human Order, Competence in Professional Ethics, Holistic Technologies, Production Systems and Management Models-Typical Case Studies, Strategies for Transition towards Value-based Life and Profession Activities: Exploring Ethical Human Conduct, Humanistic Models in Education and steps of Transition towards Universal Human Order. **5 hours**

Course Outcon	Course Outcomes: At the end of the course the student will be able to:								
22UHV47.1	Practice the method of self-exploration to understand the basic human aspiration.								
22UHV47.2	Distinguish between needs of self and body.								
22UHV47.3	Evolve a program for self-regulation and health.								
22UHV47.4	Differentiate between the characteristics and activities of different orders								
	and study the mutual fulfillment among them.								
22UHV47.5	Realize sustainable solutions to the problems in society and nature.								
22UHV47.6	Develop competence in professional ethics and strategies for the transition								
	towards a value-based life/profession.

COMPUTATIONAL TOOLS FOR ENGINEERS									
Course Code:	22CTE48	CIE Marks	50						
Teaching Hours/Week (L:T:P)	(0:0:2)	SEE Marks	50						
Credits	01	Exam Hours	02						
Course Learning Objectives:									

- 1. Apply modeling and simulation tools for a wide range of engineering problems.
- 2. Understand the analysis of data in Excel with statistics.
- 3. Use MATLAB and Simulink to perform engineering system analysis.

The engineering design process heavily relies on modeling and simulation. Modern simulation techniques enable the development of multi-physical, holistic system models that account for all system interactions. These digital models speed up the design and testing processes, saving time and money.

Module 1

Engineering Design Analysis

Need for engineering design analysis. Product and system design. Introduction to analysis parameters – stress, deformation, acceleration, internal force and stability. Static structural analysis of engineering design using finite element method (case studies). Heat transfer and fluid dynamics modeling and simulation using CFD software (case studies).

10 Hours

Module 2

Data Analysis with EXCEL

Calculate Mean, Median, Mode, Minimum, Maximum, Quartiles, Variance and Standard Deviation from some numbers. Analyze a population using data samples. Group data, build XY charts, apply Logarithmic Scale and Trend Line on a chart, forecast from some data, and calculate running averages. Normal Distribution, Exponential Distribution, Uniform Probabilities, Binomial Distribution, and Poisson Distribution.

4 Hours

Module 3

MATLAB and Simulink for Engineers

Applications of MATLAB and Simulink in electrical engineering, electrical machines and power system projects, simulation of rectifiers, inverters, choppers, and cycloconverters.

10 Hours

Course Project

Solve complex engineering problems via modeling and simulation. The project work is teamwork of 3-5 students. The goals should be clearly defined, use any software tool, and rigorous validation of the mathematical model should be done (experimental or theoretical).

Course Outcomes: At the end of the course, the student will be able to:							
22CTE48.1 Apply the Finite Element Method to solve engineering problems							
22CTE48.2	Solve statistical problems using Excel						
22CTE48.3	Perform system-level analysis using MATLAB and Simulink						
22CTE48.4	Build mathematical models for any given engineering problem.						
22CTE48.5	Demonstrate teamwork and communication skills

Industry Oriented Training - Computing Skills											
Course Code		22ITC49B	CIE Marks	50							
Teaching Hour	s/Week (L:T:P)	(0:0:2)	SEE Marks	-							
Credits		-	Exam Hours	02							
Course Learning Objectives:											
6. Use logical conditions for problem-solving and also introduce the concepts of arrays											
7. Know functions, function calls, and parameter passing											
8. Introduce algorithms and appreciate their importance in problem-solving											
9. Introduce the core concepts of OOP's											
10. Differentiate between front-end & back-end development and recognize the use of											
database	database management										
		Module-1									
Introduction to	computing cons	tructs									
Logical conditio	ns: For Loops N	ested For Loops Whi	le Loops Do-Wh	ile Loops Nesting and							
Boxes and com	bine/negate sever	al logical conditions r	ising logic operat	ions AND, OR, and							
NOT.	onno, noguto se ver	ur rogicur conditions c	ising logic operation								
Arrays & string	s. Create arrays of	f characters (strings).	use the null termi	nator, and manipulate							
strings.				4 Hours							
		Module-2									
Functions & Po											
Introduction to	Functions. Retur	ming Data From a F	function. Passing	Data Into a Function.							
Getting Valid U	ser Input, Changi	ng Parameter Values,	Pointer Basics, (Changing the Pointed to							
Value, Walking	an Array with Po	ointers, Dynamic Mer	nory Allocation,	Getting More Memory,							
Pointers to Structure. 4 Hours											
		Module-3									
Algorithm ana	lysis	· D' O D' O									
Introduction to	Algorithm Anal	ysis, Big-O, Big-O	Examples, Dyna	mic Array Operations,							
Bubble Solt, Se	lection Soft, mser	tion Soft, Recuision,	Recursive Dillary	4 Hours							
		Module-4		4 110013							
Object-orientee	d programming	niouure i									
Designing for C	bject-Oriented Pr	ogramming, Core Co	ncepts of OO Pro	gramming: Classes and							
objects, data al	objects, data abstraction, encapsulation, inheritance, benefits of inheritance, polymorphism.										
procedural and o	procedural and object-oriented programming paradigm. 4 Hours										
	Module-5										
Frontend and backend development											
UI, Database management: DBMS overview, Relational Data Model and the CREATE TABLE											
Statement, Basic Query Formulation with SQL.4 Hours											
Course Outcomes: At the end of the course the student will be able to:											
22ITC49B.1	Illustrate the use	of logical conditions	, declare and man	ipulate data into arrays							
22ITC49B.2	Implement funct	tions, function calls, a	nd parameter pas	sing							
22ITC49B.3	Design, impleme	ent, and evaluate an a	lgorithm to meet	desired needs							
22ITC49B.4	Describe the cor	re concepts of OOP's									
22ITC49B.5	Recognize the concepts of front-end development and database management

Core Values of the Institution

SERVICE

A Josephite will keep service as the prime goal in everything that is undertaken. Meeting the needs of the stakeholders will be the prime focus of all our endeavors.

EXCELLENCE

A Josephite will not only endeavor to serve, but serve with excellence. Preparing rigorously to excel in whatever we do will be our hallmark.

ACCOUNTABILITY

Every member of the SJEC Family will be guided to deliver on assurances given within the constraints set. A Josephite will always keep budgets and deadlines in mind when delivering a service.

CONTINUOUS ADAPTATION

Every member of the SJEC Family will strive to provide reliable and continuous service by adapting to the changing environment.

COLLABORATION

A Josephite will always seek to collaborate with others and be a team-player in the service of the stakeholders.

Objectives

- Provide Quality Technical Education facilities to every student admitted to the College and facilitate the development of all round personality of the students.
- Provide most competent staff and excellent support facilities like laboratory, library and internet required for good education on a continuous basis.
- Encourage organizing and participation of staff and students in in-house and outside Training programmes, seminars, conferences and workshops on continuous basis.
- Provide incentives and encouragement to motivate staff and students to actively involve in research-innovative projects in collaboration with industry and R&D centres on continuous basis
- Invite more and more number of persons from industry from India and abroad for collaboration and promote Industry-Institute Partnership.
- Encourage consultancy and testing and respond to the needs of the immediate neighbourhood.

St Joseph Engineering College

AN AUTONOMOUS INSTITUTION

Affiliated to VTU, Belagavi | Recognised by AICTE, New Delhi Accredited by NAAC with A+ Grade B.E. (CSE, ECE, EEE, ME, CIV), MBA & MCA Accredited by NBA, New Delhi
