BE SCHEME & SYLLABUS

Third Year (V and VI Semester)

With effect from 2022-23

Electrical and Electronics Engineering

ST JOSEPH ENGINEERING COLLEGE

AN AUTONOMOUS INSTITUTION Vamanjoor, Mangaluru - 575028

Service & Excellence

VISION

To be a global premier Institution of professional education and research.

MISSION

- Provide opportunities to deserving students of all communities, the Christian students in particular for quality professional education.
- Design and deliver curricula to meet the national and global changing needs through student-centric learning methodologies.
- Attract, nurture and retain the best faculty and technical manpower.
- Consolidate the state-of-art infrastructure and equipment for teaching and research activities.
- Promote all round personality development of the students through interaction with alumni, academia and industry.
- Strengthen the Educational Social Responsibilities (ESR) of the institution.

ST JOSEPH ENGINEERING COLLEGE

An Autonomous Institution Vamanjoor, Mangaluru - 575028

Affiliated to VTU – Belagavi & Recognized by AICTE New Delhi NBA – Accredited: B.E. (CSE, ECE, EEE, ME and CIV) & PG (MBA and MCA) NAAC – Accredited with A+

> **B.E. SCHEME & SYLLABUS** (With effect from 2022-23)

Electrical & Electronics Engineering

THIRD YEAR

(V and VI Semester)

AUTONOMY AND ACCREDITATION

St Joseph Engineering College (SJEC) is an Autonomous Institute under Visvesvaraya Technological University (VTU), Belagavi, Karnataka State, and is recognized by the All-India Council for Technical Education (AICTE), New Delhi. SJEC is registered under the trust "Diocese of Mangalore, Social Action Department".

The SJEC has been conferred Fresh Autonomous Status from the Academic Year 2021-22. The college was granted autonomy by the University Grants Commission (UGC) under the UGC Scheme for Autonomous Colleges 2018 and conferred by VTU. The UGC Expert Team had visited the college on 28-29 November 2021 and rigorously assessed the college on multiple parameters. The fact that only a handful of engineering colleges in the state have attained Autonomous Status adds to the college's credibility that has been on a constant upswing. Autonomy will make it convenient for the college to design curricula by recognizing the needs of the industry, offering elective courses of choice and conducting the continuous assessment of its students.

At SJEC, the Outcome-Based Education (OBE) system has been implemented since 2011. Owing to OBE practised at the college, SJEC has already been accredited by the National Board of Accreditation (NBA). Five of the UG programs, namely Computer Science & Engineering, Mechanical Engineering, Electronics and Communication Engineering, Electrical & Electronics Engineering and Civil Engineering and two of the PG programs namely, MBA and MCA programs, have accreditation from the NBA.

Also, SJEC has been awarded the prestigious A+ grade by the National Assessment and Accreditation Council (NAAC) for five years. With a Cumulative Grade Point Average (CGPA) of 3.39 on a 4-point scale, SJEC has joined the elite list of colleges accredited with an A+ grade by NAAC in its first cycle. The fact that only a small percentage of the Higher Education Institutions in India have bagged A+ or higher grades by NAAC adds to the college's credibility that has been on a constant upswing.

The college is committed to offering quality education to all its students, and the accreditation by NAAC and NBA reassures this fact. True to its motto of "Service and Excellence", the college's hard work has resulted in getting this recognition, which has endorsed the academic framework and policies that the college has been practicing since its inception. The college has been leveraging a flexible choice-based academic model that gives students the freedom to undergo learning in respective disciplines and a transparent and continuous evaluation process that helps in their holistic development.

ABOUT THE DEPARTMENT

The Department of Electrical & Electronics Engineering (EEE) was established in the year 2002. The Department has a team of well qualified and dedicated faculty with wide range of specialization. The BE programme offers a unique mix of electrical, electronics and computer related courses enabling the students to take up a professional career/higher studies in any of these areas. Subjects on Electric Circuit Analysis, Control Systems, EV Technologies, Protection and Power Systems, Electric Power Generation, Transmission and Distribution give the basic exposure to electrical fundamentals, whereas Analog and Digital Electronics, Microcontrollers, Digital Signal Processing, Embedded Systems, Hardware Description Languages(HDL), Advanced CMOS VLSI Design, Advanced Programming Languages make attractive blend of Electrical & Electronics Engineering concepts thereby creating excellent placement opportunities in various fields such as Construction, Power Distribution, Automobile, Aeronautical, Information Technology, Healthcare sectors, Semiconductor Device Design and Fabrication. The students of EEE branch are placed in Electrical & Electronics Engineering related Organizations and Software Companies. With the objective of making graduates Industry ready, Computer labs with modern Software and Hardware labs on Transformers, Motors, Power System Protective Relays, Power Electronics and Drive Systems have been operational and have helped students to improve their Technical Knowledge and Skills. The Department of Electrical & Electronics Engineering at SJEC is one of the few Departments in the region to secure NBA Accreditation since 2013.

DEPARTMENT VISION

Excel in Electrical Engineering Education and Research

DEPARTMENT MISSION

- Provide and maintain an environment designed to ensure quality Electrical Engineering Education.
- Design and deliver add-on curricula to existing syllabus to ensure compatibility with National and Global needs.
- Provide Holistic Personality Development of the students through interaction with Industry, Academia and Alumni.
- Consolidate state-of-art laboratories for Teaching and Research Activities.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- **1.** To develop necessary skills in students for successful careers through rigorous education and appreciation for the life-long learning needed to maintain competency.
- **2.** To provide students with the solid foundation in mathematical, scientific and electrical engineering to analyze data and extract relevant information for application to product design and pursue higher education.
- **3.** To train students with good scientific and engineering breadth, including proficiency in software language and use of latest software tools so as to comprehend, analyze, design and create novel products and solutions to current problems.
- **4.** To inculcate in students professional and ethical attitude, effective communication skills, teamwork skills, multidisciplinary approach, and an ability to relate engineering issues to broader social context.

PROGRAM OUTCOMES (POs)

Engineering Graduates will be able to:

1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and engineering specialization to the solution of complex engineering problems.

2. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. Conduct investigations on complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and the synthesis of information to provide valid conclusions.

5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and a leader in a team, to manage projects and in multidisciplinary environments.

12. Life-long learning: Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES (PSOs)

Electrical & Electronics Engineering Graduates will be able to:

PSO1: Make use of modern simulation software & hardware tools and techniques to analyze, present and solve Electrical Engineering problems.

PSO2: Develop entrepreneurial skills through Industry-Institute interactions by activities related to personality development and financial management.

Course Learning	Objectives: The objective of the co	urse is to		
Discuss principles	s and functions of management and to	echniques for project n	nanagement.	
Explain the need of	of social responsibilities and support	provided by governme	nt and non-gove	rnment
institutes for indu	strial development.			
Explain the role a	and importance of the entrepreneur in	n economic developme	ent and the conc	epts of
entrepreneurship.				
Discuss the impor	tance of Small Scale Industries and f	financial management	in business.	
Module-1 Manag	gement & Planning		8 ho	urs
Definition, impor	tance, nature and characteristics of r	nanagement, managen	nent functions, r	oles of
manager, levels of	f management, managerial skills.			
Nature, importance	ce and purpose of planning, types of plannning, types of planning, types of planning, types of planning, typ	plans, steps in planning		1 0
Meaning, nature	and characteristics of organization	on, process of organ	ization, princip	ples of
organization, depa	artmentalization.		0.1	
Module-2 Direct	ting & Financial Management		8 h	iours
Meaning and nati	ire of directing, leadership styles, me	otivation theories, com	imunication – m	neaning
Eineneiel stateme	ordination- meaning and importance	e. Controlling –meaning	ig, steps in conti	ronng.
Financial stateme	ents, double-entry book keeping, ca	si and revenue, price	and income et	c., cost
management desi	sion making	is – its application/co	st in engineeri	ng and
Modulo-3 Social	Sion maxing. Dosponsibility & Entropropourshi	in	8 h	ours
Meaning of social	l responsibility social responsibilitie	p of business towards.	different groups	social
audit business et	nics and corporate governance	s of busiliess towards	unificient groups	, sociai
Definition of e	ntrepreneur importance of entrer	reneurshin concepts	of entreprene	urshin
characteristics of	successful entrepreneur classification	n of entrepreneurs intr	apreneur – an en	nerging
class, comparison	between entrepreneur and intraprene	ur. myths of entreprene	eurship, entrepre	neurial
development mo	dels, entrepreneurial development c	cycle, problems faced	by entrepreneu	irs and
capacity building	for entrepreneurship.	J / 1	J 1	
Module-4 Small	l Business Enterprise		8 h	ours
Role of small sca	le industries, concepts and definition	ns of SSI enterprises.	overnment poli	icv and
development of th	ne small scale sector in India, growth	and performance of s	mall scale indus	tries in
India, sickness in	SSI sector, problems for small scal	le industries, impact o	f globalization of	on SSI,
impact of WTO/C	GATT on SSIS, ancillary industry and	l tiny industry (definiti	on only).	
Industry policy re	solution (1948-1991)			
Module-5 Proj	ect Management		8 h	nours
Meaning of proj	ject, project objectives & charact	eristics, project ident	ification- mean	ning &
importance; proje	ct life cycle, project scheduling, capit	al budgeting, generatin	g an investment	project
proposal, project	report-need and significance of rep	port, contents, formula	ation, project ar	nalysis-
market, technical, financial, economic, ecological, project evaluation and selection, project financing,				
project implementation phase. PERT and CPM, steps involved in developing the network, uses and				
limitations of pert	and CPM.			
Course Outcom	es: At the end of the course the stude	ent will be able to:		
	Review and Interpret the first pr	inciples of manageme	nt as a manage	r and
22EEE51.1	planner in an industrial environme	nt.	in as a manago	
0000051 0	Identify the features of manage	ement sciences in org	ganizing & sta	ffing.
22EEE51.2	directing & controlling the resource	es in an industrial envi	ronment.	-0'
L				

22EEE51.3	Apply the norms of financial management and business ethics to fulfill social responsibilities of industries through corporate governance.
22EEE51.4	Demonstrate the knowledge of project management principles in establishing and managing small business enterprise.
22EEE51.5	Demonstrate the understanding of management principles in undertaking projects in multidisciplinary environments.
22EEE51.6	Develop financial entrepreneurial skills through interactions with institutions that provide support for business enterprise.

Course Learning Objectives: T	he objective of the course is to					
Articulate the importance of	f the control system and types of fee	edback.				
• Apply the concept of math	ematical modelling, block diagram	and signal flow g	graph			
approaches to obtain the tra	nsfer function for the linear systems	5.				
• Determine the stability of a	system by application of time doma	in techniques.				
• Determine the stability of a	system by application of frequency	domain techniqu	es.			
Module-1 Mathematical Modelling 8 hours						
Introduction, classification of control systems, procedure for deriving transfer functions for single						
input single output systems. m	odelling of mechanical system el	lements, electrica	al systems.			

rotational systems, analogous quantities.Module-2Block Diagram & Signal Flow Graphs8 hoursBlock diagram of a closed loop system, procedure for drawing block diagram and block diagramreduction to obtain transfer function, basic properties of signal flow graph, signal flow graph

reduction to obtain transfer function, basic properties of signal flow graph, signal flow graph algebra, construction of signal flow graphs and obtain transfer functions.

Module-3 Time Domain Analysis & RH Criterion8 hoursStandard test signals, time response of second order systems(no derivations), steady-state errors and
error constants, Routh stability criterion, special cases of Routh table, application of Routh stability
criterion to linear feedback systems and stability analysis.

8 hours

8 hours

Module-4 Root Locus & Controllers

Introduction, root locus concepts, construction of root loci, rules for the construction, Introduction to P, PI, PD, PID controllers, industrial practice of controllers & applications.

Module-5 Frequency domain & Stability Analysis

Frequency response specifications (no derivations), General procedure for constructing Bode plots, Bode plots, Nyquist plots and stability analysis.

PRACTICAL MODULE

- 1. Determine the transfer function for the given closed loop system in the block diagram representation.
- 2. Determine the steady state errors of a given transfer function.
- 3. Simulate and analyze the time response of a system subjected to standard test signals.
- 4. Analyze the effect of variations of poles and zeros on unit step response.
- 5. Determine the time response specifications of the second-order system (RLC network).
- 6. Experiment to study the effect of (a) P, (b) PI, (c) PD and (d) PID controller on the step response.
- 7. Determination of the stability of a system using Root locus analysis.
- 8. Determination of the stability of a system using Bode plot analysis.
- 9. Determination of the stability of a system using Nyquist plot analysis.
- 10. Application of virtual toolbox to determine the variation of controller parameters on system stability.

Course Outco	Course Outcomes: At the end of the course the student will be able to:					
22EEE52.1	Apply the knowledge of physical systems modelling to electrical and mechanical systems.					
22EEE52.2	Apply the block diagram reduction techniques and signal flow graphs to obtain the transfer function of a system.					
22EEE52.3	Assess the effect of poles, zeros and standard input test signals for calculating the errors and determining the stability of a system.					
22EEE52.4	Evaluate the root locus techniques for stability analysis.					
22EEE52.5	Analyze the Bode and Nyquist plot techniques to determine the stability of a closed-loop system.					
22EEE52.6	Perceive the need for PID controllers in industries for engaging in professional engineering practice.

Behavioural modelling: Conditi	onal statements, multiway branch	ning, loops, sequ	uential and				
parallel blocks, programming exam	pples.						
Procedures, tasks, and function	s: Highlights of procedures, tasks	, and functions,	differences				
between tasks and functions.							
Module-5 Logic Synthesis 8 hours							
Synthesis of combinational and	d sequential logic: Introduction	to synthesis, s	ynthesis of				
combinational logic, synthesis of sequential logic with latches, synthesis of sequential logic with							
flip-flops.							
	PRACTICAL MODULE						
1. Write a Verilog code to rea	lize all the logic gates using Gate	Level modelling.	. Verify the				
design using Verilog Test B	ench Code.						

- 2. Write a Verilog code to realize all the universal logic gates using Dataflow modelling. Verify the design using Verilog Test Bench Code.
- 3. Write a Verilog code for 8 to 3 Priority Encoder using Gate Level modelling. Verify the design using Verilog Test Bench Code.
- 4. Write a Verilog code for 4 Bit Comparator using Dataflow modelling. Verify the design using Verilog Test Bench Code.
- 5. Write a Verilog code for 4-bit Ripple Carry Adder using Full Adders. Ensure that the Full Adder is designed using Half Adder. Verify the designs using Verilog Test Bench Code.
- 6. Write a Verilog code for 8:1 Multiplexer using 4:1 Multiplexers. Make use of 2:1 Multiplexers to design 4:1 Multiplexer. Verify the designs using Verilog Test Bench Code.
- 7. Write a Verilog code to realize SR, JK, D and T Flipflops using Behavioral modeling. Verify the design using Verilog Test Bench Code. Implement any two of the design on a Nexys 4

DDR FPGA Board.

- 8. Write a Verilog code to implement 4 bit Binary and BCD with Synchronous reset and Asynchronous reset to implement any sequence (up, down or both) using Behavioral modeling. Verify the design using Verilog Test Bench Code. Implement any two of the design on a Nexys 4 DDR FPGA Board.
- **9.** Write a Verilog code to Display Messages on the seven-segment display of the Nexys 4 DDR FPGA Board.

Course Outcomes: At the end of the course the student will be able to:							
22EEE53.1	Illustrate the fundamentals of hardware description language and the modeling concepts.						
22EEE53.2	Define modules and develop data flow models for a given digital circuit.						
22EEE53.3	Develop verilog descriptions of digital systems using verilog gate and behavioural modeling.						
22EEE53.4	Illustrate the need of behavioral modeling, tasks and functions in verilog.						
22EEE53.5	Examine the need of synthesis process in combinational and sequential digital systems.						
22EEE53.6	Make use of EDA and FPGA board to design, simulate and implement verilog HDL codes.

Course Learning Objectives: T	he objective of the course is to							
• Explain the applications p	ower electronics, different types of p	ower semiconduc	ctor devices					
with their switching chara	cteristics.							
• Analyze power diode, pov	ver transistors and thyristor characte	eristics.						
• Discuss performance of d	iode rectifier circuits.							
• Analyze the performance	parameters and characteristics of co	ontrolled rectifier	rs, DC- DC,					
DC -AC converters and A	C Voltage controllers.		0.1					
Module-1 Introduction to Power	Electronics, Power Diodes and Di	ode Rectifiers	8 hours					
Introduction: Applications of po	ower electronics, types of power el	ectronic circuits	, peripheral					
effects, characteristics and specific	cations of switches.	-1						
Power diodes: Introduction, diod	e characterístics, reverse recovery	characteristics, p	ower diode					
diadag with gwitched DL load	n carbide schottky diodes, diode swi	iched KL Ioad, Ir	eewneening					
Diede restifier: introduction sing	le phase full wave rectifier with P a	nd DI load						
Module-2 Power Transistors	ie pliase full wave fectifier with K a	IIU KL 10au	8 hours					
Introduct-4 rower i railsistors 8 nours Noccoord 1								
characteristics Binelar Junct	, Power MOSFEIS: steady state	characteristics,	switching					
characteristics, Bipolar Juncu	ICBTs: stoady state characteristic	characteristics,	switching					
MOSEET gate drive BIT base driv	register of gate and base drives	s, switching cha	rs and onto-					
couplers	e, isolation of gate and base drives,		is and opto-					
Module-3 Thyristors			8 hours					
Introduction, thyristor characterist	ics, two-transistor model of thyristo	r, thyristor turn c	n thyristor					
turn-off, a brief study on thyrist	or types, series operation of thyri	stors, parallel o	peration of					
thyristors, di/dt protection, dy/dt	protection. DIACs, requirements	of thyristor firi	ng circuits.					
unijunction transistor relaxation os	cillator for triggering thyristor.	5	<i>c</i>					
Module-4 Controlled Rectifiers a	and AC Voltage Controllers		8 hours					
Controlled rectifiers: Introduction	n, single phase half wave circuit wit	h R load, RL, RI	E with and					
without freewheeling diode. Sin	gle phase full converter with RL	E load, single	phase dual					
converters, principle of operation of	of three phase full converters and the	ree phase dual co	nverters.					
AC voltage controllers: Introduct	ion, principle of phase control and i	integral cycle cor	ntrol, single					
phase full wave controllers with I	R and RL load. Principle of operati	on of three phase	e full wave					
controllers.								
Module-5 DC-DC and DC-AC co	onverters		8 hours					
DC-DC converters: Introduction,	principle of step down and step-up	chopper with R,	RL load,					
performance parameters, DC-DC converter classification.								
DC-AC converters : Introduction, principle of operation single phase bridge inverters, three phase								
bridge inverters, voltage control	ot single-phase inverters, harmonic	e reductions, cur	rent source					
inverters.								
	$(4h_{1}, a_{1}, a_{2}, a_{3}, a_{4}, a_{4}$	ha.						

22EEE54.1	Explain application area of power electronics, types of power electronic circuits with their applications.
22EEE54.2	Explain types of power diodes, their characteristics, and the effects of power diodes on RL circuits, diode rectifier circuits with RL loads.
22EEE54.3	Analyze steady state, switching characteristics and gate control requirements of

I

	different power transistors with their limitations.
22EEE54.4	Analyze different types of thyristors, their operation, turn on and turn off methods.
22EEE54.5	Explain designing, analysis techniques and characteristics of thyristor controlled rectifiers.
22EEE54.6	Analyze the principle of operation of DC – DC converters, single phase and three phase DC -AC converters and AC voltage controllers.

Electrical Estimation & Costing						
Course Code	22EEE561	CIE Marks	50			
Course Type		SEE Marks	50			
(Theory/Practical/Integrated)	Theory (Professional Elective)	Total Marks	100			
Teaching Hours/Week (L:T:P)	3:0:0	SEE Hours	03			
Total Hours	40 Hours	Credits	03			
Course Learning Objectives: T	he objective of the course is to					
• Discuss market survey, es	stimates, purchase enquiries, tenders	s, comparative sta	atement and			
payment of bills and India	an electricity act and some of the rul	les.				
• Discuss distribution of en	ergy in a building, wiring and meth	ods of wiring, ca	bles used in			
internal wiring, wiring ac	cessories, fittings and fuses.	U.				
Discuss design of lighting	points and its number, total load, su	ub-circuits, size of	f conductor.			
• Discuss different types of	service mains and estimation of po	wer circuits.				
Discuss main component	s of a substation, their graphical re	presentation and	preparation			
of single line diagram of a	a substation.					
Module-1 Principles of Estimation	0 n		8 hours			
Introduction to estimation and cos	sting, electrical schedule, catalogue	s, market survey	and source			
selection, recording of estimates, o	letermination of required quantity of	f material, labour	conditions,			
determination of cost material and	labour, contingencies, overhead cha	rges, profit, purch	ase system,			
purchase enquiry and selection of	f appropriate purchase mode, comp	parative statemer	nt, purchase			
orders, payment of bills, tender for	rm, general idea about IE rule, Ind	ian electricity(IE)) act and IE			
rules -29,30,45,46,47,50,51,54,55,77 and 79.						
Module-2 Wiring 8 hours						
Introduction, distribution of ener	gy in a building, PVC casing an	nd capping, conc	luit wiring,			
desirability of wiring. Types of cables used in internal wiring, multi strand cables, voltage grading						
and specification of cables. Main switch and distribution board, conduits and its accessories and						
fittings. Lighting accessories and f	ittings, types of fuses, size of fuse, fu	use units, earthing	g conductor.			
Internal wiring : general rules for	wiring, design of lighting points (re	efer to seventh ch	apter of the			
text book), number of points, det	ermination of total load, number of	sub –circuits, ra	itings, main			
switch and distribution board and	size of conductor, current density, la	ayout.				
Module-3 Service Mains			8 hours			
Introduction, types, estimation of	underground and overhead service	connections, intro	oduction to			
design and estimation of power	circuits, important considerations	regarding motor	installation			
wiring, input power, input curren	it to motors, rating of cables, rati	ng of fuse, size	of conduit,			
distribution board main switch and	1 starter.	T !	0 1			
Module-4 Estimation of Overne	ad I ransmission and Distribution	Lines	8 nours			
(Review of line supports, conduct	for materials, size of conductor for	overnead transm	lission line,			
types of insulators) [no question s	aduators configuration analing on	d alagraphics arms, po	on longths			
lightning arrestors phase plates	denger plates anti alimbing day	io clearances, sp	banda of			
iumpara muffa pointa to ba con	sidered at the time of creation of	overhead lines	s, beaus of			
supports, softing of stays, fixing of	f gross arms fixing of insulators	orductor oraction	Popoiring			
and jointing of conductors dead en	supports, setting of stays, fixing of cross arms, fixing of insulators, conductor erection. Repairing					
iumpers tee-offs earthing of tr	ansmission lines guarding of ov	erhead lines cle	earances of			
conductor from ground, spacing be	etween conductors, important specifi	fications.	curunees of			
Module-5 Estimation of Substati	ions		8 hours			
Main electrical connection, graph	cal symbols for various types of ar	paratus and circu	it elements			
on substation main connection dia	gram, single line diagram of typics	al substations. eq	uipment for			
substation, substation auxiliaries s	upply, substation earthing.		r 101			
,						

Course Outcomes: At the end of the course the student will be able to:						
22EEE561.1	Implement wiring methods, cables used, design of lighting points and sub- circuits, internal wiring, wiring accessories and fittings, fuses and types.					
22EEE561.2	Implement estimation of service mains.					
22EEE561.3	Implement estimation of power circuits.					
22EEE561.4	Implement estimation of overhead transmission system.					
22EEE561.5	Implement estimation of overhead distribution system.					
22EEE561.6	Discuss types of substation, main components and estimation of substation.

Course Learnin	ng Objectives: T	he objective of the course is to				
Understa	und working of El	lectric Vehicles and recent trends.				
• Explain	various propulsio	on drives for electric vehicles.				
• Explain	different energy s	storage devices used for electric and	hybrid electric v	ehicles.		
Understa	and the concept of	f braking employed in electric vehic	eles.			
Analyze	the design aspect	ts of hybrid electric vehicles.				
Module-1 Introd	luction to Electr	ic and Hybrid Electric Vehicles		8 hours		
Electric Vehicle	s: configuration	of electric vehicles, performance of	of electric vehicl	es, traction		
motor characteris	tics, tractive effo	rt and transmission requirement, end	ergy consumption	1.		
Hybrid Electric	Vehicles: conce	pt of hybrid electric drive trains, ar	chitecture of hyb	orid electric		
drive trains, serie	s hybrid electric	drive trains, configuration of paralle	el hybrid electric o	drive trains.		
Module-2 Electr	ric Propulsion			8 hours		
Function of typic	cal propulsion sy	stem, classification of electric mot	tor drives for EV	and HEV		
application.						
DC motor drive	e: principal of op	eration and performance, combined	l armature voltag	ge and field		
control.						
Induction motor	Induction motor drive: principal of operation, steady state performance, torque-slip characteristics					
of induction moto	of induction motor, general configuration of constant volt/hertz control, power electronic control.					
Permanent mag	gnet BLDC mo	tor drive: basic principles, adva	antages and dis	advantages,		
construction and classification, speed control of BLDC motor drives.						
Module-3 Ener	gy storage for E	V and HEV		8 hours		
Battery Technologies: lead acid battery, nickle based batteries, lithium based batteries.						
Ultracapacitors:	features of ultra	capacitors, basic principles of ultrac	apacitors.			
Flywheels: basic	structure and ope	eration principles of flywheels.				
Hybridization o	f energy storage	concepts of hybrid energy storag	e, passive and ac	tive hybrid		
energy storage w	ith battery and ul	tracapacitor.		0.1		
Module-4 Braki	ng			8 hours		
Fundamentals of	of braking: brak	ing energy consumed in urban driv	ving, braking ene	ergy versus		
vehicle speed, bra	aking energy vers	sus braking power, braking power v	ersus vehicle spe	ed, braking		
energy versus v	ehicle decelerati	on rate, braking energy on front	and rear axles	, basics of		
regenerative brak	ing.		<i>,</i>	•		
Brake system: b	rake system of E	V and HEV, parallel hybrid brake sy	stem (exclude de	esign).		
Module-5 Design	n Aspects of Hyt	orid Electric Vehicles		8 hours		
Series hybrid ele	ectric drive train	design: operation patterns, control	strategies- max. S	SOC of PPS		
control strategy,	engine on-off co	ntrol strategy, design principles of	a series (electrica	ll coupling)		
hybrid drive train	- electrical coupl	ing devices, power rating design of	traction motor.	1		
drivatrain and da	electric arive t	antrol strategies may SOC of DDS	lifer torque coup			
off control strategy						
	<u>sy</u> .					
Course Outcom	es: At the end of	the course the student will be able t	0:			
22EEE563.1	Explain the wor	king of electric vehicles and recent	trends.			
22EEE563.2	Explain the arch	nitecture of hybrid electric vehicles.				
22EEE563.3	Analyze braking	g system in an EV.				
22EEE563.4	Explain various	energy storage system for electric v	vehicles.			
		24				
		<i>∠</i> ¬				

Electric Vehicle Technologies

22EEE563.5	Explain the control strategy for a Hybrid Drive Train.
22EEE563.6	Explain the propulsion system in electric vehicles.

Course Type (Theory/Practical/Integrated) Theory (Professional Elective) SEE Marks 30 Total Mours/Week (L.T:P) 3:0:0 SEE Hours 03 Total Hours/Week (L.T:P) 3:0:0 SEE Hours 03 Course Learning Objectives: The objective of the course is to 0 Impart knowledge on the Construction, principle of operation, control and performance of switched reluctance motors and permanent magnet brushless D.C. motors. Impart knowledge on the Construction, principle of operation and performance of permanent magnet synchronous motors and synchronous reluctance motor. Impart knowledge on linear electrical machines and servo motors. Impart knowledge on Linear electrical machine and permanent magnet axial flux machines. 8 hours Module-1 Stepper Motors 8 hours Introduction, variable reluctance stepper motor, permanent magnet stepper motor, hybrid stepper motor, other types of stepper motor, open loop control of stepper motor, applications of stepper motor. 8 hours Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis, constraints on pole arc and tooth arc, torque equation, and characteristics, power converter circuits, control of SRM, rotor position sensors, current regulators, microprocessor - based control of SRM, sensorless control of SRM. 8 hours Permanent magnet de motor and brushless permanent magnet DC motor: 8 hours 9 hours 9 hours	Course Code		22EEE564	CIE Marks	50						
Theory (Professional Elective) Total Marks 100 Teaching Hours/Week (L.T.P.) 3:0:0 SEE Hours 03 Total Hours 40 Hours Credits 03 Course Learning Objectives: The objective of the course is to Impart knowledge on the Construction, principle of operation, control and performance of stepping motors. Impart knowledge on the Construction, principle of operation and performance of permanent magnet synchronous motors and synchronous reluctance motors. Impart knowledge on the Construction, principle of operation and performance of permanent magnet synchronous motors and synchronous reluctance motor. Inpart knowledge on a the Construction, principle of operation and performance of permanent magnet synchronous motors and synchronous reluctance motor. Impart knowledge on Linear electrical machine and permanent magnet axial flux machines. Rhours Module-1 Stepper Motors 8 hours Introduction, variable reluctance stepper motor, permanent magnet stepper motor, hybrid stepper motor, open loop control of stepper motor, closed loop control of stepper motor, microprocessor based control of stepper motor, microprocessor – based control of SRM. Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis, construits on pole are and tooh are, torque equation, and characteristics, power converter circuits, control of SKM. Permanent magnet de motor and brushless permanent magnet DC motor: permanent magnet de (PDC) motor, brushless permanent magnet de	Course Type			SEE Marks	50						
Teaching Hours/Week (L:T:P) 3:0:0 SEE Hours 03 Total Hours 40 Hours Credits 03 Course Learning Objectives: The objective of the course is to Impart knowledge on the Construction, principle of operation, control and performance of stepping motors. Impart knowledge on the Construction, principle of operation, and performance of permanent magnet synchronous motors and synchronous reluctance motors. Impart knowledge on the Construction, principle of operation, and performance of permanent magnet synchronous motors and synchronous reluctance motor. Impart knowledge on Linear electrical machine and permanent magnet axial flux machines. Module-1 Stepper Motors 8 hours Introduction, variable reluctance stepper motor, permanent magnet stepper motor, ybbrid stepper motor, open loop control of stepper motor, closed loop control of stepper motor, microprocessor based control of stepper motor, applications of stepper motor. Module-2 SRM & PM Motors 8 hours Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis, constraints on pole arc and tooth arc, torque equation, duracteristics, power converter circuits, sensorless control of SRM. Permanent magnet de motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motors. 8 hours Module-3 PM Synchronous Motors 8 hours Module-3 PM Synchronous Motors 8 hours Module-3 PM Synchronopos	(Theory/Practic	al/Integrated)	Theory (Professional Elective)	Total Marks	100						
Total Hours 40 Hours Credits 03 Course Learning Objectives: The objective of the course is to Impart knowledge on the Construction, principle of operation, control and performance of stepping motors. Impart knowledge on the Construction, principle of operation, control and performance of switched reluctance motors and permanent magnet brushless D.C. motors. Impart knowledge on the Construction, principle of operation and performance of permanent magnet synchronous motors and synchronous reluctance motors. Impart knowledge on Linear electrical machines and servo motors. Impart knowledge on single phase special machines and servo motors. Impart knowledge on single phase special machines and servo motors. Shours Module-1 Stepper Motors 8 hours Introduction, variable reluctance stepper motor, permanent magnet stepper motor, hybrid stepper motor, open loop control of stepper motor, applications of stepper motor. Module-2 SRM & PM Motors Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis, constraints on pole are and tooth are, torque equation and characteristics, power converter circuits, control of SRM. Permanent magnet de motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motors. Permanent magnet synchronous motor (PMSM): construction, principle of operation, principle of operation, principle of operation, principle of operation, Emf equation, phasor diagram, circle diagram, comparison of conventional and PMSM, control of SyRM, advantages and applications. Synchronous Motors 8 h	Teaching Hours	Week (L:T:P)	3:0:0	SEE Hours	03						
Course Learning Objectives: The objective of the course is to Impart knowledge on the Construction, principle of operation, control and performance of stepping motors. Impart knowledge on the Construction, principle of operation, and performance of switched reluctance motors and permanent magnet brushless D.C. motors. Impart knowledge on the Construction, principle of operation and performance of permanent magnet synchronous motors and synchronous reluctance motor. Impart knowledge on single phase special machines and servo motors. Impart knowledge on Linear electrical machine and permanent magnet axial flux machines. Module-I Stepper Motors 8 hours Introduction, variable reluctance stepper motor, permanent magnet stepper motor, hybrid stepper motor, other types of stepper motor, windings in stepper motor, storque equation, characteristics of stepper motor, open loop control of stepper motor, applications of stepper motor, for stepper motor, applications of stepper motor. Module-2 SRM & PM Motors 8 hours Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM, analysis, constraits on pole are and tooth arc, torque equation, sincoprocessor – based control of SRM, sensorless control of SRM. Permanent magnet emotor and brushless permanent magnet DC motor: Permanent magnet synchronous motor (PMSM): construction, principle of operation, Emf equation, torque equation, phasor diagram, circle diagram, comparison of conventional and PMSM, control of SYRM, advatatese and applications. Module-3 PM Synchronous Motors 8 hours	Total Hours	× /	40 Hours	Credits	03						
Impart knowledge on the Construction, principle of operation, control and performance of stepping motors. Impart knowledge on the Construction, principle of operation and performance of permanent magnet synchronous motors and synchronous reluctance motor. Impart knowledge on the Construction, principle of operation and performance of permanent magnet synchronous motors and synchronous reluctance motor. Impart knowledge on Linear electrical machines and servo motors. Impart knowledge on single phase special machines and servo motors. Impart knowledge on Linear electrical machine and permanent magnet axial flux machines. Module-1 Stepper Motors Shours Introduction, variable reluctance stepper motor, permanent magnet stepper motor, obardid stepper motor, closed loop control of stepper motor, object of stepper motor, applications of stepper motor. Module-2 SRM & PM Motors Shours Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis, constraints on pole arc and tooth arc, torque equation and characteristics, power converter circuits, control of SRM, rotor position sensors, current regulators, microprocessor – based control of SRM. Permanent magnet de motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motor. brushless permanent magnet dc (BLDC) motors. Module-3 PM Synchronous Motor Shours Shours Shours Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications. Synchronous reluctance motor, hysterist motor, single phase reluctance motor, universal motor. Course Outcomes: At the end of the course the student will be able to: 222EEE564.1 Explain the performance and control of stepper motors, and their applications. Explain theory of operation and control of stepper motor, imagnet synchronous reluctance motor single sphase reluctance motor, single phase reluctance motor, single phase	Course Learni	ng Objectives: T	he objective of the course is to	I I							
 stepping motors. Impart knowledge on the Construction, principle of operation, control and performance of switched reluctance motors and permanent magnet brushless D.C. motors. Impart knowledge on single phase special machines and servo motors. Impart knowledge on Linear electrical machine and permanent magnet axial flux machines. Module-1 Stepper Motors Shours Introduction, variable reluctance stepper motor, permanent magnet stepper motor, hybrid stepper motor, other types of stepper motor, windings in stepper motors, torque equation, characteristics of stepper motor, open loop control of stepper motor, closed loop control of stepper motor, applications of stepper motor. Module-1 SRM & PM Motors Shours Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis, constraints on pole are and tooth arc, torque equation, characteristics, power converter circuits, control of SRM, rotor position sensors, current regulators, microprocessor – based control of SRM, sensorless control of SRM. Permanent magnet dc motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motor, brushless permanent magnet dc (BLDC) motors. Module-3 PM Synchronous Motors Shours Permanent magnet synchronous motor (PMSM): construction, principle of operation, and PMSM, control of SRM, applications. Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, charoter (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications. Synchronous motor, hystersis motor, single phase reluctance motor, DC linear motor, DC servo motors, AC servo motors. Module-3 Secial Electrical Machines Shours Curse Outcomes: At the end of the course the student will be able to	 Impart k 	nowledge on the	Construction, principle of operation	, control and perf	ormance of						
 Impart knowledge on the Construction, principle of operation, control and performance of switched reluctance motors and permanent magnet brushless D.C. motors. Impart knowledge on the Construction, principle of operation and performance of permanent magnet synchronous motors and synchronous reluctance motor. Impart knowledge on Linear electrical machine and permanent magnet axial flux machines. Module-1 Stepper Motors 8 hours Impart knowledge on the construction principle of operation, characteristics of stepper motor, other types of stepper motor, windings in stepper motors, torque equation, characteristics of stepper motor, open loop control of stepper motor, closed loop control of stepper motor, microprocessor based control of stepper motor, applications of stepper motor, microprocessor based control of stepper motor, applications of stepper motor. Module-2 SRM & PM Motors 8 hours Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis, constraints on pole arc and tooth arc, torque equation and characteristics, power converter circuits, control of SRM, roor position sensors, current regulators, microprocessor – based control of SRM, sensorless control of SRM. Permanent magnet de motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motor, brushless permanent magnet dc (BLDC) motors. Module-3 PM Synchronous motor (PMSM): construction, principle of operation, Emf equation, ontary, hyasor diagram, circle diagram, comparison of conventional and PMSM, control of SyRM, advantages and applications. Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications. Module-4 Decial Electrical Machines 8 hours Module-5 Linear Motors 8 PMAF Machines 8 hours Module-5 Linear Motors 8 PMAF Machines. Shours<	stepping	motors.		-							
switched reluctance motors and permanent magnet brushless D.C. motors.  Impart knowledge on the Construction, principle of operation and performance of permanent magnet synchronous motors and synchronous reluctance motor. Impart knowledge on Linear electrical machines and servo motors. Impart knowledge on Linear electrical machine and permanent magnet axial flux machines. Module-1 Stepper Motors 8 hours Introduction, variable reluctance stepper motor, permanent magnet stepper motor, hybrid stepper motor, other types of stepper motor, windings in stepper motors, torque equation, characteristics of stepper motor, open loop control of stepper motor, closed loop control of stepper motor, microprocessor based control of stepper motor, applications of stepper motor. Module-2 SRM & PM Motors 8 hours Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis, constraints on pole arc and toot arc, torque equation and characteristics, power converter circuits, control of SRM, rotor position sensors, current regulators, microprocessor – based control of SRM, sensorless control of SRM. Permanent magnet de motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motor, brushless permanent magnet dc (BLDC) motors. Module-3 PM Synchronous Motors 8 hours Permanent magnet synchronous motor (PMSM): construction, principle of operation, Emf equation, control of SyRM, advantages and applications. Synchronous reluctance motor (SYRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications. Module-5 Linear Motors & PMAF Machines 8 hours AC series motor, repulsion motor, hysteresis motor, single phase reluctance motor, universal motor, linear reluctance motor, linear synchronous motor, DC linear motor, linear reluctance motor, linear levitation machines. Permanent magnet	switched reluctance motors and permanent magnet brushless D.C. motors.										
permanent magnet synchronous motors and synchronous reluctance motor. Impart knowledge on Linear electrical machines and servo motors. Impart knowledge on Linear electrical machine and permanent magnet axial flux machines. Module-1 Stepper Motors 8 hours Introduction, variable reluctance stepper motor, permanent magnet stepper motor, hybrid stepper motor, open loop control of stepper motor, closed loop control of stepper motor, microprocessor based control of stepper motor, applications of stepper motor, microprocessor based control of stepper motor, applications of stepper motor, microprocessor based control of stepper motor, applications of stepper motor, microprocessor based control of stepper motor, applications on pole arc and tooth arc, torque equation and characteristics, power converter circuits, control of SRM, rotor position sensors, current regulators, microprocessor – based control of SRM, sensorless control of SRM. Permanent magnet dc motor and brushless permanent magnet DC motor: 8 hours Module-3 PM Synchronous Motors 8 hours Permanent magnet synchronous motor (PMSM): construction, principle of operation, Emf equation, torque equation, phasor diagram, circle diagram, comparison of conventional and PMSM, control of PMSM, applications. 8 hours Synchronous reluctance motor, hysteresis motor, single phase reluctance motor, universal motor. DC servo motors, AC servo motors. 8 hours Module-4 Special Electrical Machines 8 hours Module-5 Innear Motors & PMAF Machines 8 hours Module-5 Linear Motors & PMAF	• Impart knowledge on the Construction, principle of operation and performance of										
 Impart knowledge on single phase special machines and servo motors. Impart knowledge on Linear electrical machine and permanent magnet axial flux machines. Module-1 Stepper Motors Shours Introduction, variable reluctance stepper motor, permanent magnet stepper motor, hybrid stepper motor, open loop control of stepper motor, closed loop control of stepper motor, microprocessor based control of stepper motor, applications of stepper motor. Module-2 SRM & PM Motors Shours Module-2 SRM & PM Motors Shours Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis, constraints on pole arc and tooth arc, torque equation and characteristics, power converter circuits, control of SRM, rotor position sensors, current regulators, microprocessor – based control of SRM, sensorless control of SRM. Permanent magnet dc motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motor, brushless permanent magnet dc (BLDC) motors. Module-3 PM Synchronous Motors Shours Permanent magnet synchronous motor (PMSM): construction, principle of operation, Emf equation, torque equation, phasor diagram, circle diagram, comparison of conventional and PMSM, control of SyRM, applications. Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications. Module-4 Special Electrical Machines A hours A circle and toors & MAFMA Machines Shours A circle and thor skew mathenes: comparison of permanent radial and axial flux machines, construction of PMAF Machines: comparison of permanent radial and axial flux machines, construction of PMAF Machines: comparison of permanent radial and axial flux (PMAF) machines: comparison of permanent radial and axial flux (PMAF) ma	permane	ent magnet synchr	onous motors and synchronous relu	ctance motor.							
 Impart knowledge on Linear electrical machine and permanent magnet axial flux machines. Module-1 Stepper Motors Shours Introduction, variable reluctance stepper motor, permanent magnet stepper motor, hybrid stepper motor, other types of stepper motor, stepper motor, closed loop control of stepper motor, applications of stepper motor. Module-2 SRM & PM Motors Shours Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis, constraints on pole are and tooth arc, torque equation and characteristics, power converter circuits, control of SRM, rotor position sensors, current regulators, microprocessor – based control of SRM. Permanent magnet dc motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motor, brushless permanent magnet dc (BLDC) motors. Module-3 PM Synchronous Motors 8 hours Permanent magnet synchronous motor (PMSM): construction, principle of operation, Emf equation, control of SyRM, applications. Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications. Module-4 Special Electrical Machines 8 hours AC series motor, repulsion motor, hysteresis motor, single phase reluctance motor, universal motor. DC servo motors, AC servo motors. Module-5 Linear Motors & PMAF Machines. Permanent magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF. Course Outcomes: At the end of the course the student will be able to: 22EEE564.1 Explain theory of operation and control of switched reluctance motor and permanent magnet brushless D.C. motors. <td>• Impart k</td><td>nowledge on sing</td><td>le phase special machines and serve</td><td>o motors.</td><td>. 1 . 01</td>	• Impart k	nowledge on sing	le phase special machines and serve	o motors.	. 1 . 01						
Madule-I Stepper Motors 8 hours Introduction, variable reluctance stepper motor, permanent magnet stepper motor, hybrid stepper motor, open loop control of stepper motor, closed loop control of stepper motor, microprocessor based control of stepper motor, applications of stepper motor, microprocessor based control of stepper motor, applications of stepper motor, microprocessor based control of SRM: construction, principle of working, basics of SRM analysis, constraints on pole are and tooth are, torque equation and characteristics, power converter circuits, control of SRM, rotor position sensors, current regulators, microprocessor – based control of SRM, sensorless control of SRM. Permanent magnet dc motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motor, brushless permanent magnet dc (BLDC) motors. 8 hours Module-3 PM Synchronous Motors 8 hours Permanent magnet synchronous motor (PMSM): construction, principle of operation, Emf equation, control of SyRM, advantages and applications. 8 hours Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications. 8 hours Module-5 Linear Motors & PMAF Machines 8 hours Module-5 Linear Motors & PMAF Machines. 8 hours Course Outcorrers: A the end of the course the student will be able to: 22EEE564.1 Explain theory of operation and control of switched reluctance motor and permanent magnet brushless p.C. motors. 22EEE564.3	• Impart	knowledge on L	inear electrical machine and perm	nanent magnet a	ixial flux						
Introduction, variable reluctance stepper motor, permanent magnet stepper motor, hybrid steppermotor, other types of stepper motor, windings in stepper motor, closed loop control of stepper motor,Module-2 SRM & PM MotorsSwitched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis, constraints on pole arc and tooth arc, torque equation and characteristics, power converter circuits, constraints on pole arc and tooth arc, torque equation and characteristics, power converter circuits, constraints on pole arc and tooth arc, torque equation and characteristics, power converter circuits, constraints on pole arc and tooth arc, torque equations, microprocessor – based control of SRM, sensorless control of SRM.Permanent magnet dc motor and brushless permanent magnet DC motor: permanent magnet dc motor and brushless permanent magnet DC motor: permanent magnet dx motor (PMSM): construction, principle of operation, Emf equation, torque equation, phasor diagram, circle diagram, comparison of conventional and PMSM, control of PMSM, applications.Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications.Module-4 Special Electrical MachinesAC series motor, pulsion motor, hysteresis motor, single phase reluctance motor, universal motor. DC servo motors, AC servo motors.Module-5 Linear Motors & PMAF MachinesNear electric machines:Permanent magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF.Course Outcomes: At the end of the course the student will be able to: 22EEEE56	Madula 1 Stopp	s. An Matars			8 hours						
Introduction, variable relative stepper motor, permatche magnet stepper motor, norque equation, characteristics of stepper motor, open loop control of stepper motor, closed loop control of stepper motor, microprocessor based control of stepper motor, applications of stepper motor, motor, otheracteristics of stepper motor, storage equation, characteristics of stepper motor, open loop control of stepper motor, closed loop control of stepper motor, microprocessor based control of stepper motor, principle of working, basics of SRM analysis, constraints on pole arc and tooth arc, torque equation and characteristics, power converter circuits, control of SRM, rotor position sensors, current regulators, microprocessor – based control of SRM, sensorless control of SRM. Permanent magnet dc motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motor, brushless permanent magnet dc (BLDC) motors. 8 hours Module-3 PM Synchronous Motors 8 hours Permanent magnet synchronous motor (PMSM): construction, principle of operation, Emf equation, torque equation, phasor diagram, circle diagram, comparison of conventional and PMSM, control of PMSM, applications. Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications. 8 hours AC series motor, repulsion motor, hystersis motor, single phase reluctance motor, universal motor, linear electric machines: linear induction motor, linear synchronous motor, DC linear motor, linear levitation machines. 8 hours Permanent magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines; armature windings, torque and emf equations of PMAF, phas	Introduction var	iable reluctance s	tenner motor permanent magnet st	enner motor hyb	o nours						
Instance Sector Stepper Instance Notice Module-2 SRM & PM Motors S hours Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis, constraints on pole arc and tooth arc, torque equation and characteristics, power converter circuits, control of SRM, rotor position sensors, current regulators, microprocessor – based control of SRM, sensorless control of SRM. Permanent magnet dc motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motor, brushless permanent magnet dc (BLDC) motors. 8 hours Module-3 PM Synchronous Motors 8 hours Permanent magnet synchronous motor (PMSM): construction, principle of operation, Emf equation, control of SRM, advantages and applications. 8 hours Module-4 Special Electrical Machines 8 hours AC series motor, repulsion motor, hysteresis motor, single phase reluctance motor, universal motor, DC servo motors, AC servo motors. 8 hours Module-4 Special Electrical Machines 8 hours Linear electric machines: PMAF Machines: comparison of permanent radial and axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines; comparison of permanent radial and axial flux machines, construction of PMAF machines; comparison of permanent radial and axial flux machines, construction of PMAF machines; comparison of permanent radial and axial flux machines, construction of PMAF machines; comparison of permanent radial	motor other type	s of stepper motor	r windings in stepper motors torqu	e equation charac	cteristics of						
Stepper Initial, open instepper initial, open initinitial, open initial, open initial, open init	stepper motor	open loop contro	of stepper motor closed loop	control of sten	per motor						
Module-2 SRM & PM Motors 8 hours Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis, constraints on pole arc and tooth arc, torque equation and characteristics, power converter circuits, control of SRM, rotor position sensors, current regulators, microprocessor – based control of SRM, sensorless control of SRM. Permanent magnet dc motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motor, brushless permanent magnet dc (BLDC) motors. Module-3 PM Synchronous Motors 8 hours Permanent magnet synchronous motor (PMSM): construction, principle of operation, Emf equation, torque equation, phasor diagram, circle diagram, comparison of conventional and PMSM, control of PMSM, applications. 8 hours Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications. 8 hours Module-4 Special Electrical Machines 8 hours Module-5 Linear Motors & PMAF Machines 8 hours Linear electric machines: linear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, inear levitation machines. 8 hours Permanent magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, ornstruction of SPMAF. 8 hours Linear electric machines: At the end of the course the student will be able to: 22EEE564.1 Explain the performance and control of switched reluctance motor and permanent magnet bushless. D.C. motors.	microprocessor b	ased control of st	epper motor, applications of stepper	motor.	per motor,						
Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis, constraints on pole arc and tooth arc, torque equation and characteristics, power converter circuits, control of SRM, rotor position sensors, current regulators, microprocessor – based control of SRM, sensorless control of SRM.Permanent magnet dc motor and brushless permanent magnet DC motor: permanent magnet 	Module-2 SRM	Module-2 SRM & PM Motors & hours									
constraints on pole arc and tooth arc, torque equation and characteristics, power converter circuits, control of SRM, rotor position sensors, current regulators, microprocessor – based control of SRM, sensorless control of SRM.Permanent magnet dc motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motor, brushless permanent magnet dc (BLDC) motors.Module-3 PM Synchronous Motors8 hoursPermanent magnet synchronous motor (PMSM): construction, principle of operation, Emf equation, torque equation, phasor diagram, circle diagram, comparison of conventional and PMSM, control of PMSM, applications.Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications.Module-4 Special Electrical Machines8 hoursAC series motor, repulsion motor, hysteresis motor, single phase reluctance motor, universal motor. DC servo motors, AC servo motors.8 hoursModule-5 Linear Motors & PMAF Machines8 hoursLinear electric machines: linear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, linear levitation machines.Permanent magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF.Course Outcomes:At the end of the course the student will be able to:22EEE564.1Explain the performance and control of speper motors, and their applications.22EEE564.3Explain theory of operation and control of permanent magnet synchronous motors and synchronous reluctance motor. <td colspan="9">Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis,</td>	Switched Reluctance Motor (SRM): construction, principle of working, basics of SRM analysis,

DC servo motors, AC servo motors.8 hoursModule-5 Linear Motors & PMAF Machines8 hoursLinear electric machines: linear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, universal flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF.Course Outcomes: At the end of the course the student will be able to: 22EEE564.1Explain theory of operation and control of switched reluctance motor and permanent magnet magnet brushless D.C. motors.22EEE564.3Explain theory of operation and control of permanent magnet synchronous motors and synchronous reluctance motor.	constraints on pole arc and tooth arc, torque equation and characteristics, power converter circuits.										
sensorless control of SRM. Permanent magnet dc motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motor, brushless permanent magnet dc (BLDC) motors. Module-3 PM Synchronous Motors 8 hours Permanent magnet synchronous motor (PMSM): construction, principle of operation, Emf equation, torque equation, phasor diagram, circle diagram, comparison of conventional and PMSM, control of PMSM, applications. Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications. Module-4 Special Electrical Machines 8 hours Module-5 Linear Motors & PMAF Machines 8 hours Module-5 Linear Motors & PMAF Machines. 8 hours Linear electric machines: 1 inear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, linear levitation machines. Permanent magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF. Course Outcomes: At the end of the course the student will be able to: 22EEE564.1 Explain the performance and control of switched reluctance motor and permanent magnet brushless D.C. motors. Bayassian theory of operation and control of permanent magnet synchronous motor and synchronous reluctance motor. Explain theory of operation and control of permanent magnet synchronous motor and permanent magnet brushless D.C. motors. <td>control of SRM,</td> <td>rotor position sens</td> <td>sors, current regulators, microproces</td> <td>ssor – based contr</td> <td>ol of SRM,</td>	control of SRM,	rotor position sens	sors, current regulators, microproces	ssor – based contr	ol of SRM,						
Permanent magnet dc motor and brushless permanent magnet DC motor: permanent magnet dc (PMDC) motor, brushless permanent magnet dc (BLDC) motors.Module-3 PM Synchronous Motors8 hoursPermanent magnet synchronous motor (PMSM): construction, principle of operation, Emf equation, torque equation, phasor diagram, circle diagram, comparison of conventional and PMSM, control of PMSM, applications.Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications.Module-4 Special Electrical Machines8 hoursAC series motor, repulsion motor, hysteresis motor, single phase reluctance motor, universal motor. DC servo motors, AC servo motors.8 hoursInear electric machines:Inear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, linear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, inear levitation machines.9 magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF.Course Outcomet:At the end of the course the student will be able to:22EEE564.1Explain the performance and control of stepper motors, and their applications.22EEE564.3Explain theory of operation and control of permanent magnet synchronous motors and synchronous reluctance motor.	sensorless contro	ol of SRM.									
dc (PMDC) motor, brushless permanent magnet dc (BLDC) motors.Module-3 PM Synchronous Motors8 hoursPermanent magnet synchronous motor (PMSM): construction, principle of operation, Emfequation, torque equation, phasor diagram, circle diagram, comparison of conventional and PMSM, control of PMSM, applications.Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications.Module-4 Special Electrical Machines8 hoursAC series motor, repulsion motor, hysteresis motor, single phase reluctance motor, universal motor. DC servo motors, AC servo motors.8 hoursModule-5 Linear Motors & PMAF Machines8 hoursLinear electric machines: linear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, linear levitation machines.Permanent magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF.Course Outcomes: At the end of the course the student will be able to: 22EEE564.1Explain the performance and control of stepper motors, and their applications.22EEE564.2Explain theory of operation and control of switched reluctance motor and permanent magnet brushless D.C. motors.22EEE564.3Explain theory of operation and control of permanent magnet synchronous motors and synchronous reluctance motor.	Permanent mag	net dc motor and	d brushless permanent magnet DO	C motor: perman	ent magnet						
Module-3 PM Synchronous Motors8 hoursPermanent may synchronous motor (PMSM): construction, principle of operation, Emfequation, torque equation, phasor diagram, circle diagram, comparison of conventional and PMSM, control of PMSM, applications.Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation.Module-4 Speciztance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation.Module-4 Speciztance motor, hysteresis motor, single phase reluctance motor, universal motor. DC servo motors.AC series motor, relusion motor, hysteresis motor, single phase reluctance motor, universal motor. DC servo motors.Module-5 Liner Motors & PMAF MachinesModule-5 Liner induction machines.Permanent magnet scale flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and equations of PMAF, phasor diagram, output equation, applications of PMAF.22EEE564.1Explain the performance and control of switched reluctance motor and permanent magnet brushless D.C. motors.22EEE564.2Explain theory of operation and control of permanent magnet synchronous	dc (PMDC) moto	dc (PMDC) motor, brushless permanent magnet dc (BLDC) motors.									
Permanent magnet synchronous motor (PMSM): construction, principle of operation, Emf equation, torque equation, phasor diagram, circle diagram, comparison of conventional and PMSM, control of PMSM, applications.Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications.Module-4 Special Electrical Machines8 hoursAC series motor, repulsion motor, hysteresis motor, single phase reluctance motor, universal motor. DC servo motors, AC servo motors.8 hoursModule-5 Linear Motors & PMAF Machines8 hoursLinear electric machines: linear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, linear levitation machines.9Permanent magnet axial flux (PMAF) machines: construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF.2Course Outcomes: 22EEE564.1Explain the performance and control of stepper motors, and their applications.222EEE564.3Explain theory of operation and control of switched reluctance motor and permanent magnet brushless D.C. motors.222EEE564.3Explain theory of operation and control of permanent magnet synchronous motors and synchronous reluctance motor.5	Module-3 PM S	Synchronous Mo	tors		8 hours						
equation, torque equation, phasor diagram, circle diagram, comparison of conventional and PMSM, control of PMSM, applications.Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications.Module-4 Special Electrical Machines8 hoursAC series motor, repulsion motor, hysteresis motor, single phase reluctance motor, universal motor. DC servo motors, AC servo motors.8 hoursModule-5 Linear Motors & PMAF Machines8 hoursLinear electric machines:10 linear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, linear levitation machines.Permanent magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF.Course Outcomes: At the end of the course the student will be able to:22EEE564.1Explain the performance and control of stepper motors, and their applications.22EEE564.3Explain theory of operation and control of switched reluctance motor and permanent magnet brushless D.C. motors.22EEE564.3Explain theory of operation and control of permanent magnet synchronous motors and synchronous reluctance motor.	Permanent mag	gnet synchronou	s motor (PMSM): construction, j	principle of oper	ation, Emf						
control of PMSM, applications.Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications.Module-4 Special Electrical Machines8 hoursAC series motor, repulsion motor, hysteresis motor, single phase reluctance motor, universal motor. DC servo motors, AC servo motors.8 hoursModule-5 Linear Motors & PMAF Machines8 hoursInear electric machines: linear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, linear levitation machines.9 hoursPermanent magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and end equations of PMAF, phasor diagram, output equation, applications of PMAF.22EEE564.1Explain the performance and control of stepper motors, and their applications.22EEE564.2Explain theory of operation and control of permanent magnet synchronous motors and synchronous reluctance motor.	equation, torque	equation, phasor d	liagram, circle diagram, comparison	of conventional a	ind PMSM,						
Synchronous reluctance motor (SyRM): construction of SyRM, working, phasor diagram and torque equation, control of SyRM, advantages and applications.Module-4 Special Electrical Machines8 hoursAC series motor, repulsion motor, hysteresis motor, single phase reluctance motor, universal motor. DC servo motors, AC servo motors.8 hoursModule-5 Linear Motors & PMAF Machines8 hoursLinear electric machines: linear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, linear levitation machines.8 hoursPermanent magnet axial flux (PMAF) machines: construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF.22EEE564.1Explain the performance and control of stepper motors, and their applications.Explain theory of operation and control of switched reluctance motor and permanent magnet brushless D.C. motors.22EEE564.3Explain theory of operation and control of permanent magnet synchronous motors and synchronous reluctance motor.	control of PMSN	I, applications.									
IterationControl of SyRM, advantages and applications.Module-4Special Electrical Machines8 hoursAC series motor, repulsion motor, hysteresis motor, single phase reluctance motor, universal motor. DC servo motors, AC servo motors.8 hoursModule-5Linear Motors & PMAF Machines8 hoursLinear electric machines: linear leuctance motor, linear levitation machines. Permanent magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF.22EEE564.1 22EEE564.2 22EEE564.3Explain the performance and control of stepper motors, and their applications. Explain theory of operation and control of permanent magnet synchronous motors and synchronous reluctance motor.	Synchronous re	luctance motor	(SyRM): construction of SyRM, w	orking, phasor d	lagram and						
Module-4 Special Electrical Machines8 hoursAC series motor, repulsion motor, hysteresis motor, single phase reluctance motor, universal motor. DC servo motors, AC servo motors.8 hoursModule-5 Linear Motors & PMAF Machines8 hoursLinear electric machines: linear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, linear levitation machines.8 hoursPermanent magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF.Course Outcomes: At the end of the course the student will be able to:22EEE564.1Explain the performance and control of stepper motors, and their applications.22EEE564.2Explain theory of operation and control of switched reluctance motor and permanent magnet brushless D.C. motors.22EEE564.3Explain theory of operation and control of permanent magnet synchronous motors and synchronous reluctance motor.	torque equation,	control of SyRM,	advantages and applications.		0.1						
AC series motor, repulsion motor, hysteresis motor, single phase reluctance motor, universal motor.DC servo motors, AC servo motors.8 hoursModule-5 Linear Motors & PMAF Machines8 hoursLinear electric machines: linear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, linear levitation machines.8 hoursPermanent magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF.Course Outcomes: At the end of the course the student will be able to:22EEE564.1Explain the performance and control of stepper motors, and their applications.22EEE564.2Explain theory of operation and control of switched reluctance motor and permanent magnet brushless D.C. motors.22EEE564.3Explain theory of operation and control of permanent magnet synchronous motors and synchronous reluctance motor.	Module-4 Speci	al Electrical Ma	cnines		8 nours						
Module-5Linear Motors & PMAF Machines8 hoursLinear electric machines:linear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, linear levitation machines.Permanent magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF.Course Outcomes:At the end of the course the student will be able to:22EEE564.1Explain the performance and control of stepper motors, and their applications.22EEE564.2Explain theory of operation and control of switched reluctance motor and permanent magnet brushless D.C. motors.22EEE564.3Explain theory of operation and control of permanent magnet synchronous motors and synchronous reluctance motor.	AC series motor,	repuision motor, ΔC serve motor	s supervision single phase reluct	ance motor, unive	ersal motor.						
Linear electric machines: linear induction motor, linear synchronous motor, DC linear motor, linear reluctance motor, linear levitation machines.Permanent magnet axial flux (PMAF) machines: comparison of permanent radial and axial flux machines, construction of PMAF machines, armature windings, torque and emf equations of PMAF, phasor diagram, output equation, applications of PMAF.Course Outcomes: At the end of the course the student will be able to:22EEE564.1Explain the performance and control of stepper motors, and their applications.22EEE564.2Explain theory of operation and control of switched reluctance motor and permanent magnet brushless D.C. motors.22EEE564.3Explain theory of operation and control of permanent magnet synchronous motors and synchronous reluctance motor. Research Methodology and Intellectual Property Rights									
Course Code	22RMI57	CIE Marks	50						
Course Type	Theory	SEE Marks	50						
(Theory/Practical/Integrated)	Theory	Total Marks	100						
Teaching Hours/Week (L:T:P)	2:0:0	SEE	3 Hours						
Total Hours	25 hours	Credits	02						

Course Learning Objectives:

- 1. To understand the basic concepts related to research
- 2. To learn the concept of literature survey, review and technical writing
- 3. To discuss the basics of intellectual property
- 4. To explain the patents, copyrights, trademarks, industrial designs and geographical indications

Module-1 Research Methodology and Literature Survey (5 hours)

Research Methodology: Meaning, Objectives, Types of research, Method versus methodology, Research process, Criteria of good research.

Literature Survey, Literature Review: Introduction, process, databases and management tools. Identifying gap areas from literature review. Plagiarism: Introduction, tools for detection, avoiding plagiarism. Illustrations.

Textbook 1: Chapter 1, Textbook 2: Ch 7-9, 14-17.

Module-2 Technical Writing and Presentations (5 hours)

Research Paper Writing: Importance, steps of writing research papers, Contents of a research article, Illustrations.

Thesis Writing: Synopsis, Introduction, Literature review, Aim and Objectives, Methodology, Time frame, Results and discussions, Conclusions. Illustrations.

Research Proposal Writing: Preliminary requirements for proposal writing, Standard heads in research proposal. Illustrations.

Textbook 2: Chapter 20-22, 26-28, 35.

Module-3 Introduction to IPR and Patents (5 hours)

Introduction to Intellectual Property: Types of IP, Role of IP in the economic and cultural development of the society, IP governance, IP as a global indicator of innovation, National IPR Policy in India. Textbook 3: Chapter 1,

Patents: Conditions for patent, Non-patentable matters, Inventions Eligible for Patenting, Salient features of the Indian Patent 1970, Process of patenting, Types of patent applications, Patent infringements. Case examples. Textbook 3: Chapter 2: 2.1.

Module-4 Copyright and Trademarks (5 hours)

Copyright: Classes of copyrights, Salient features of the Indian Copyright Act 1957, Criteria for copyright, Copyrights of the author, Copyright Infringements, Non-Copyright Work, Process of copyright registration. Copyright cases.

Trademark: Eligibility Criteria, Classification, Trade Mark Rules 2017, Advantages of registration, Types of trademark registered in India, Process for Trademarks Registration, Case examples.

Textbook 3: Chapter 2: 2.2 and 2.3.

Module-5 Industrial Designs and Geographical Indications (5 hours)

Industrial Designs: Introduction, Eligibility criteria, Famous industrial designs, Features of Design Act 2000, Non-Protectable industrial designs in India, Procedure for Registration of Industrial Designs, Case examples.

Geographical Indications (GIs): Introduction, Rights granted to holders, Popular GIs registered in India, salient features of Geographical Indications of Goods (Registration & Protection) Act, 1999, Non-Registerable GI, Procedure for GI Registration, Case examples. Textbook 3: Chapter 2: 2.4 and 2.5.

Course Outcomes: At the end of the course the student will be able :							
22RMI57.1	To conduct literature survey, review and define a research problem.						
22RMI57.2	To follow research ethics and develop the art of writing technical papers and reports.						
22RMI57.3	To discuss the role of Intellectual Property and Patents in India.						
22RMI57.4	To explain the various aspects of Copyright and Trademark in Indian context.						
22RMI57.5	To explain legal aspects of Industrial Designs and Geographical Indications in India.						
22RMI57.6	To discuss the case studies related to the different Intellectual Property.

Emerging Technologies: A Primer									
Course Code	22ETP58	CIE Marks	100						
Teaching Hours/Week (L:T:P)	0:0:2	SEE Marks	-						
Credits 1 Exam Hours 03									

Course Learning Objectives:

- To develop a strong awareness of the ethical and societal implications associated with emerging 1. technologies.
- 2. To instil practical skills related to AI (Artificial Intelligence), Blockchain, Digital Twins, RPA (Robotic Process Automation), and Cybersecurity.
- To enable experiences of working on a team project, allowing students to apply their knowledge 3. and skills to a real-world problem and present their findings effectively.

Module-1: AI and Web 3.0 (06 Hours)

Introduction to Emerging Technologies: Overview of the course, Importance of staying updated with emerging technologies, Ethical and societal considerations.

Artificial Intelligence (AI): Definition and history of AI, Machine learning and deep learning, Applications of AI in various industries, In-Class Assignment: AI in Everyday Life, Homework Assignment: Building a Simple Chatbot.

Web 3.0: Blockchain and Metaverse - Introduction to Blockchain technology, Metaverse and its potential, In-Class Assignment: Creating a Simple Smart Contract, Homework Assignment: Exploring a Metaverse Platform.

Module-2: Smart Manufacturing and Robotic Process Automation (06 Hours)

Smart Manufacturing and Digital Twins: The concept of Smart Manufacturing, Role of IoT and sensors, Digital Twins and their applications, In-Class Assignment: Explore the designs of Digital Twins, Homework Assignment: Analysing a Smart Manufacturing Case Study.

Robotic Process Automation: Understanding Robotic Process Automation (RPA), Types of robots and their applications, Human-robot collaboration, In-Class Assignment: Automating a Task with RPA, Homework Assignment: Researching Advances in Robotics.

Module-3: Cybersecurity and Quantum Computing (06 Hours)

Cybersecurity: Importance of cybersecurity in the digital age, Threats and vulnerabilities, Security best practices, In-Class Assignment: Ethical Hacking Simulation, Homework Assignment: Creating a Cybersecurity Plan.

Quantum Computing: Introduction to Quantum Mechanics, Quantum bits (qubits) and quantum gates, Quantum supremacy and real-world applications. Homework Assignment: Exploring Quantum Computing Research.

Module-4: Project Work (06 Hours)

Team Formation, Synopsis submission, Mid-Term Progress Review, Final Project Presentation.

Course Outcome	Jourse Outcomes: At the end of the course the student will be able to:									
22ETP58.1	Assess the ethical and societal impacts of emerging technologies, demonstrating critical thinking skills.									
22ETP58.2	Apply AI and Web 3.0 concepts to develop practical solutions and explore real- world applications.									
22ETP58.3	Apply RPA principles and tools to automate common tasks to boost productivity.									
22ETP58.4	Explain common cybersecurity threats and recommend best practices to safeguard digital assets.									
22ETP58.5	Explain the fundamentals of quantum computing and its real-world applications.									
22ETP58.6	Develop a solution using emerging technologies for a real-world problem in teams.

VI Semester

	Digital Signal Processing		
Course Code	22FFF61	CIE Morlzo	50
Course Tupe	22EEE01	SEE Morks	50
(Theory/Practical/Integrated)	Integrated	Total Marks	100
Teaching Hours/Week (I ·T·P)	2.2.2	SEE Hours	03
Total Hours	30 hours Theory ± 10 L ab slots	Credits	03
Course Learning Objectives: T	be objective of the course is to	0100105	0.
• Understand the basic concer	ts of signals and its basic operation	c	
• Evaluate the 7 transform of	I TI systems	5.	
 Evaluate the Z transform of Evaluate DET of various signal 	ls using properties of DET		
 Evaluate DF1 of various signa Evaluate of DET 	and inverse DET using fast and efficie	nt algorithms	
 Explain the evaluation of DFT Design infinite impulse response 	and inverse DTT using fast and efficie	nt and bilinger tre	neformation
techniques.	ise digital inters using impulse invaria	unt and Diffiear tra	uisionnation
• Discuss direct, cascade and pa	rallel methods of realizing a digital IIR	filter.	
• Discuss windowing techniq	ue of designing FIR filter and realiz	ing a digital FIR	filter.
Module-1 Digital Signals and Syste	ems		8 hours
Definitions of signals and a syst	em, classification of signals, basic	operations on s	signals and
properties of systems, convolution	sum, impulse response, properties.	•	C
Module-2 Z Transforms			8 hours
Definition of Z-transform, properti	es of ROC, properties of Z-transform	ns, inversion of 2	Z-transform
methods Z- Transform analysis of	LTI systems, transfer function, stab	ility and causality	y, unilateral
Z-transform.			
Module-3 Discrete Fourier Transf	forms		8 hours
Definitions, properties-linearity,	shift, symmetry properties- circu	lar convolution	– periodic
convolution, use of tabular arrays,	circular arrays, Stock ham's method	od, linear convol	ution – two
finite duration sequence, one finite	& one infinite duration, overlap ad	d and save metho	ods.
Module-4 Fast Fourier Transform	ns Algorithms	1 0	8 hours
Introduction, decimation in time	e algorithm, first decomposition,	number of co	omputations,
continuation of decomposition, nu	mber of multiplications, computatio	nal efficiency, de	ecimation in
frequency algorithms, inverse radi	x - 2 algorithms.		0.1
Module-5 Design of IIR and FIR	Digital Filters	11 1	8 hours
Introduction, impulse invariant tra	ansformation, bilinear transformation	ons, all pole and	alog filters-
Butterworth & Chebyshev filters	s, design of digital Butterworth	filter by impuls	e invariant
transformation and bilinear transfo	rmation. Realization of IIR digital s	ystems: direct for	rm, cascade
form and parallel form.	nation miles homeing homeing D	la alvera a vyje dave	, design of
FID digital filters by use of winde	rectangular, namining, namining, B	lackman window	, design of
FIR digital liners by use of windo	ows, realization of FIR systems: an	ect form, cascad	e form and
inical pilase totili.			
	PRACTICAL MODULE		
1. To perform linear convolution	tion of given sequences using direct	method	
2. Computation of N - point I	DFT and to plot the magnitude and t	bhase spectrum	
3. To perform Linear convolu	ition using DFT and IDFT (Stockha	m's) method	
4. To perform circular convol	lution using DFT and IDFT (Stockh	am's) method	

- 5. Calculation of DFT & IDFT by FFT
- 6. Evaluation of impulse response of a system
- 7. FIR Filter design using window functions
- 8. Design and implementation of IIR filters to meet given specification (low pass, high pass, band pass and band reject filters)
- 9. Design and implementation of FIR filters to meet given specification (low pass, high pass, band pass and band reject filters) using frequency sampling technique.
- 10. Realization of IIR and FIR filters.

Course Outcom	Course Outcomes: At the end of the course the student will be able to:						
22EEE61.1	Apply DFT and IDFT to perform linear filtering techniques on given sequences						
	to determine the output.						
22EEE61 2	Apply fast and efficient algorithms for computing DFT and inverse DFT of a						
	given sequence.						
22FFF61 3	Design and realize infinite impulse response Butterworth and Chebyshev digital						
	filters using impulse invariant and bilinear transformation techniques.						
22FFF6 1 <i>A</i>	Develop a digital IIR filter by direct, cascade, parallel, ladder and FIR filter by						
22EEE01.4	direct, cascade and linear phase methods of realization.						
22EEE41 5	Design and realize FIR filters by use of window function and frequency						
22EEE01.5	sampling method.						
22EEE61.6	Use modern software tools to analyze and solve signal processing problems.

Computer Aided Electrical Drawing												
Course Code	22EEE62	CIE Marks	50									
Course Type	Integrated	SEE Marks	50									
(Theory/Practical/Integrated)	Integrated	Total Marks	100									
Teaching Hours/Week (L:T:P)	2:2:2	SEE Hours	03									
Total Hours	30 hours Theory + 10 Lab slots	Credits 04										
Course Learning Objectives: The objective of the course is to:												
• Develop armature winding diagram for DC and AC machines.												
• Develop a Single Line Diagram of Generating Stations and substation using the standard symbols.												
 Construct sectional views of core and shell types transformers using the design data. 												
 Construct sectional views of core and shen types transformers using the design data. Construct sectional views of assembled DC and AC machine and their parts using the design. 												
data or the sketches.		1 0	0									
Module-1 DC and AC Machine	Winding diagrams		8 hours									
Winding diagrams:												
(a) Develop winding diagrams of l	D.C. machines: simplex double laye	r lap and wave w	indings.									
(b) Develop winding diagrams of	A.C. machines: integral and fracti	onal slot double	layer three									
phase lap and wave windings.												
Module-2 Single Line Diagram	of Power systems		8 hours									
Single line diagrams of generating	g stations and substations covering	incoming circuit	s, outgoing									
circuits, busbar arrangements (sin	gle, sectionalized single, main and	transfer, double	bus double									
breaker, sectionalized double bus,	one and a half circuit breaker arra	ngement, ring m	ain), power									
transformers, circuit breakers, is	olators, earthing switches, instrum	nent transformer	s, surge or									
lightning arresters, communication	devices (power-line carrier) and li	ne trap.	0.1									
Module-3 Transformer Assembl	y Drawings		8 nours									
of single and three phase core and	sing design data, sketches of both: tr	ansformers - sect	ional views									
Module 4 D C Concreter/Motor			8 hours									
D C generator/motor assembly dr	awings using design data skatche	s or both · section	al views of									
voke with poles armature and com	awings using using utility sectore	s of both. section										
Module-5 Alternator Assembly	inductor dealt separatery.		8 hours									
Alternator assembly drawings us	sing design data, sketches or both:	sectional views of	of stator and									
rotor dealt separately.												
	PRACTICALMODULE											
	PART – A											
Draw winding diagram for the given	DC machine using AutoCAD (a)Lap w	vinding and (b)Way	ve winding									
		C (<i>)</i> (<i>)</i>	0									
	PART – B											
Draw winding diagram for the given	AC machine using AutoCAD											
	$\mathbf{PART} - \mathbf{C}$											
Draw the single line diagram for the	given Substation/ Generating station us	ing AutoCAD										
	PART D											
Draw the sectionalized view of Trans	formers, DC machines, Alternators usi	ng AutoCAD										
Course Outcomest At the ard of	the course the student will be able t	····										
Course Outcomes: At the end of	the course the student will be able t	0:										
22EEE62.1 Develop armature	winding diagram for DC and AC m	nachines										

22EEE62.2	Develop a Single Line Diagram of Generating Stations and substation using the standard symbols.

22EEE62.3	Construct sectional views of core and shell types transformers using the design data.
22FFF62 4	Construct sectional views of assembled DC machine and their parts using the
2215151502. 4	design data or the sketches.
22FFF62 5	Construct sectional views of assembled machine and their parts using the design
22EEE02.3	data or the sketches.
22FFF62.6	Draw sectional views of assembled alternator or its parts using the design data or
22EEE02.0	the sketches.

Question paper pattern:

- The question paper will have two parts, PART A and PART B.
- Each part is for 50 marks.
- Part A is for Modules 1 and 2.
- Questions 1 and 2 of PART A will be only on DC windings or only on AC windings. Students have to answer any one of them. The marks prescribed is 25.
- Question 3 of PART A covering module 2 is compulsory. The marks prescribed is 25.
- Part B is for Modules 3, 4 and 5.

Power System Analysis										
Course Code		22EEE63	CIE Marks	50						
Course Type		Theory	SEE Marks	50						
(Theory/Practica	al/Integrated)		Total Marks	100						
Teaching Hours	/Week (L:T:P)	3:0:0	SEE Hours	03						
Total Hours		40 Hours	Credits	03						
Course Learning Objectives: The objective of the course is to:										
• Articulate the importance of per unit system, reactance diagram and bus matrices in power										
system ana	system analysis.									
• Analyze th	e symmetrical fa	ault conditions in power system an	d to discuss the s	selection of						
circuit brea	akers.									
• Apply the	knowledge of se	quential components to analyze the	unbalanced faul	ts in power						
system.										
 Discuss sta 	bility and types of	of stability for a power system and the	ne equal area crite	erion for the						
evaluation	of stability of a s	simple system.								
Module-1 Repre	sentation of pov	ver System		8 hours						
Introduction, sin	gle phase repres	sentation, one line diagram, per u	init quantity, rea	ctance and						
impedance diagra	im, steady state n	nodel of synchronous machine, pow	ver transformer, ti	ransm1ss10n						
line and load.		.1		0.1						
Module-2 Symm	etrical Fault An	alysis	waaatawaala of an	8 hours						
Introduction, tran	sients in RL series	es circuits, short-circuit current and	reactance's of sy	nchronous						
symmetric short	au, internal volta	age of loaded synchronous machine	are concept of sh	conditions,						
capacity of bus		culations, selection of circuit break	ers, concept of si							
Capacity of bus.										
Introduction syn	Introduction symmetrical component transformation phase shift in star dalta transformation									
sequence impeda	nces & network	s of transmission lines, sequence i	mpedances and r	networks of						
synchronous ma	chine. sequence	impedances and networks of tra	ansformers. cons	truction of						
sequence network	s of a power sys	tem.	·····							
Module-4 Unsyn	nmetrical Fault	Analysis		8 hours						
Introduction, sym	metrical compor	nent analysis of unsymmetrical fault	ts, single line-to-g	ground(LG)						
fault, line-to-line	(LL) fault, doubl	e line-to-ground (LLG) fault, open	conductor faults.							
Module-5 Stabil	ity Analysis			8 hours						
Steady-state and	transient stability	, rotor dynamics and the swing equ	ation, power ang	le equation.						
Equal – area crite	erion of stability	and its application for transient stal	bility evaluation.	Solution of						
swing equation us	sing point by point	nt method and Runge Kutta method	(4 th order).							
Course Outcom	es: At the end of	the course the student will be able t	to:							
22EEE63 1	Apply the know	ledge of per unit system to construct	t reactance diagra	am of power						
22000000	system.									
22EEE63.2	Analyze symmetry	etrical three phase faults in power	system to determ	nine short						
	circuit MVA.									
22EEE63.3	Apply the conce	ept of symmetrical components to ca	liculate sequence	components						
	and draw seque	nce networks of the power system.								
22EEE63.4	Analyze the	unsymmetrical faults using syn	nmetrical comp	onents to						
		in a formula		. 11:4						
22EEE03.5	Analyze dynam	ics of synchronous machine to eval	uate transient stat	mity.						
22EEE63.6	Apply the know	wledge of numerical methods to	evaluate the stat	outity of the						
	system.

Course Learning Objectives. T	he objective of the course is to								

Course Learning Objectives: The objective of the course is to

- Discuss electric heating, air-conditioning and electric welding.
- Explain laws of electrolysis, extraction and refining of metals and electrodeposition.
- Explain the terminology of illumination, laws of illumination, construction and working of electric lamps. Design of interior and exterior lighting systems- illumination levels for various purposes light fittings, types of lighting systems.
- Discuss systems of electric traction, speed time curves and mechanics of train movement, motors used for electric traction and their control, braking of electric motors, traction systems and power supply and other traction systems.
- Give awareness of technology of electric and hybrid electric vehicles. ٠

Module-1 Heating ,Welding and Electrolytic Process

Heating and welding: Electric heating, resistance ovens, radiant heating, induction heating, high frequency eddy current heating, dielectric heating, the arc furnace, heating of buildings, air conditioning, electric welding, and modern welding techniques.

Electrolytic metallurgical process: Ionization, Faraday's laws of electrolysis, definitions, extraction of metals, refining of metals, electrodeposition. Textbook : 1

Module-2 Illumination

Introduction, radiant energy, definitions, laws of illumination, polar curves, photometry, measurement of mean spherical candle power by integrating sphere, illumination photometer, energy radiation and luminous efficiency, electric lamps, cold cathode lamp, lighting fittings, illumination for different purposes, requirements of good lighting. Textbook : 1

Module-3 Electric Traction

8 hours Electric traction: Speed - time curves and mechanics of train movement: introduction, systems of traction, systems of electric traction, speed - time curves for train movement, mechanics of train movement, train resistance, adhesive weight, coefficient of adhesion.

Motors for electric traction: Introduction, series and shunt motors for traction services, two similar motors (series type) are used to drive a motor car, tractive effort and horse power, ac series motor, three phase induction motor.

Control of motors: Control of DC motors, tapped field control or control by field weakening, multiple unit control, control of single phase motors, control of three phase motors. Textbook: 1

Module-4 Electric Braking and Traction Systems

Braking: Introduction, regenerative braking with three phase induction motors, braking with single phase series motors, mechanical braking, magnetic track brake, electro – mechanical drum brakes.

Electric traction systems and power supply: System of electric traction, AC electrification transmission lines to sub - stations, sub - stations, feeding and distribution system of ac traction feeding and distribution system for dc tramways, electrolysis by currents through earth, negative booster, system of current collection, trolley wires.

Trams, trolley buses and diesel – electric traction: Tramways, the trolley bus, diesel electric traction.

Textbook: 1

Module-5 Electric Vehicles

Electric Vehicles: Configurations of electric vehicles, performance of electric vehicles, tractive effort in normal driving, energy consumption.

8 hours

8 hours

8 hours

8 hours

Hybrid Electric Vehicles: Concept of hybrid electric drive trains, architectures of hybrid electric drive trains. Textbook : 2

Course Outcon	nes: At the end of the course the student will be able to:						
22EEE641.1	Discuss the various techniques of electric heating and welding.						
22EEE641.2	Discuss the fundamentals of electrolytic process, terminologies, and their application.						
22EEE641.3	641.3 Illustrate the laws of illumination, terminologies, classification of light sources and design of various lighting systems.						
22EEE641.4	Discuss different traction systems, speed-time curves, mechanism of train movement.						
22EEE641.5	Explain the motors used for electric traction, braking of electric motors and traction systems.						
22EEE641.6	Explain the working and structure of electric and hybrid electric vehicles.

Types of timers	, programming	timers, ON and OFF- delay timers, p	ulse timers, form	ns of counter,						
programming, u	p and down cou	nters, timers with counters, sequencer.								
Module-5 Shift	register and da	ata handling		8 hours						
Shift registers,	ladder programs	, registers and bits, data handling, arit	hmetic functions	, temperature						
control and bott	le packing appli	cations.								
Note: Programn	ning is to be with	n reference to only Mitsubishi PLC (G	[S).							
Course Outcon	nes: At the end of	of the course the student will be able to	:							
22EEE642.1	Apply the eng	ineering knowledge to analyse various	control function	is using PLC						
	ladder progran	iming.								
22EEE642.2	Use modern to	ools & technique for PLC based operation	tion on internal r	elays, timers						
	acounters, shi	it registers, controller.	. 11							
22EEE042.3	Use modern to	ois & tecnnique for PLC based operati	on on controllers							
22EEE642.4	Realize the im	portance of programmable logic control	oller in automatic	on, Hardware						
	Erral :	terrer of SCADA	nerong rearning							
22EEE042.5	Explain impor	tance of SCADA.	.							
22EEE642.6	Realize the im	portance learning Internal architecture	e and input/output	ut devices of						
22EEE042.0	programmable	controller for lifelong learning.

Course Learnin	ng Objectives: T	he objective of the course is to								
Introduc	Introduce the Importance and Application of Energy Storage Systems									
• Familiar	Familiarize with different energy storage technologies									
Understa	and the operation	and basic technical characteristics	of the various ene	rgy storage						
systems	4 1 6		• .• .							
Study m	ethods of energy	storage and efficiency in installat	ions that require	continuous						
power st	uppiy othods of operate	storage and officiency in operations	stome with DES							
• Study III	nected and non-ir	storage and efficiency in energy sys	stellis with KES,							
Module-1 Overs	view of Energy S	torage Systems		8 hours						
Energy storage s	vstems overview	- scope of energy storage needs	and opportunitie	s in energy						
storage technolo	ogy overview an	d key disciplines comparison of	time scale of st	orages and						
applications, ener	rgy storage in the	power and transportation sectors, i	mportance of ene	rgy storage						
systems in electri	ic vehicles, curren	t electric vehicle market.		-8, 5001080						
Module-2 Therm	nal storage system			8 hours						
Thermal storage	system-heat pum	os, hot water storage tank, solar the	rmal collector, ap	plication of						
phase change mat	terials for heat sto	rage-organic and inorganic material	s, efficiencies, an	d economic						
evaluation of the	rmal energy stora	ge systems.								
Module-3 Electro	omagnetic storage	systems		8 hours						
Electromagnetic	storage systems,	double layer capacitors with elec	ctrostatically char	ge storage,						
superconducting	magnetic energy	y storage (SMES), concepts, adv	antages and lim	itations of						
electromagnetic e	energy storage sy	stems, and future prospects of electronic stems, and future prospects of electronic stems and statements and statem	rochemical storag	e systems.						
Module-4 Electro	ochemical storage	system		8 hours						
Batteries: Work	king principle o	f battery, primary and secondar	y (flow) batteri	es, battery						
performance eva	luation methods,	major battery chemistries and the	ir voltages- Li-io	n battery&						
Metal hydride ba	ttery vs lead-acid	battery.		and and						
super capacitor	s: working print	cipie of super capacitor, types of s	uper capacitors, o	cyching and						
electrochemical s	super capacitors	ence between battery and super capa		JII to Hybrid						
Fuel cell: Princir	ole of operation o	f a fuel cell types of fuel cells hyb	rid fuel cell-batte	rv systems						
hybrid fuel cell-s	uper capacitor sv	stems.		r <i>y systems</i> ,						
Module-5 Batter	ry design			8 hours						
Mechanical desig	gn and packaging	of battery packs for electric vehicle	es, advanced batte	ery-assisted						
quick charger for	electric vehicles,	charging optimization methods for	lithium-ion batter	ies, thermal						
run-away for batt	tery systems, ther	mal management of battery systems	s, state of charge	and state of						
health estimation over the battery lifespan, recycling of batteries from electric vehicles.										
Course Outcom	Course Outcomes: At the end of the course the student will be able to:									
22EEE643.1 Identify the role of energy storage in power systems.										
22EEE043.2 Identify thermal storage technologies and their applications.										
22EEE643.3 Compare Electrochemical and Electromagnetic storage technologies.										
22EEE643.4	Analyze the app	propriate storage technologies for di	tterent applicatio	ns.						
22EEE643.5	Analyze the ma	nagement and design of battery sys	tems.							

22EEE643.6 Explore the alternate energy storage technologies.

Total Hours		40 Hours	Credits	03		
Course Learni	ng Objectives: T	he objective of the course is to				
Identify	the demand supp	ly gap of energy in Indian scenario.				
Carry ou	ut energy audit of	an industry/Organization.				
Draw th	e energy flow dia	agram of an industry and identify the	ne energy wasted	or a waste		
stream.						
• Identify	appropriate energ	gy conservation method to reduce th	e wastage of ener	gy.		
Evaluate	e the techno econo	omic feasibility of the energy conser	vation technique	adopted.		
Module-1 Ener	gy Scenario			8 hours		
Commercial and	d Non-commerc	ial energy, primary energy reso	ources, commerc	ial energy		
production, final	l energy consum	ption, energy needs of growing e	economy, long to	erm energy		
scenario, energy	pricing, energy s	ector reforms, energy and environm	ent, energy secu	rity, energy		
conservation and	its importance, r	estructuring of the energy supply se	ector, energy stra	tegy for the		
future, air polluti	on, climate chang	ge. Energy Conservation Act-2001 a	nd its features.			
Module-2 Ener	rgy Efficiency in	Electrical Systems		8 hours		
Electricity billing	Electricity billing, electrical load management and maximum demand control, maximum demand					
controllers; powe	er factor improve	ment, automatic power factor contr	ollers, efficient o	peration of		
transformers, ene	ergy efficient mot	tors, soft starters, variable speed dri	ves; performance	evaluation		
of fans and pump	s, flow control str	ategies and energy conservation opp	ortunities in fans	and pumps,		
electronic ballast	, energy efficient	lighting and measures of energy eff	iciency in lightin	g system.		
Module-3 Energ	gy Auditing	1. 1.00	C"1	8 hours		
Introduction, eler	ments of energy a	udits, different types of audit, energy	y use profiles, me	asurements		
in energy audits,	presentation of en	nergy audit results.		0.1		
Module-4 Electr	ricity and Other		<u> </u>	8 hours		
Distinguishing fo	eatures of electric	city as a commodity, four pillars o	f market design:	imbalance,		
scheduling and d	lispatch, congesti	on management, ancillary services.	Framework of In	dian power		
sector and introd	uction to the avai	lability based tariff (ABT).		0 h		
Niodule-5 Appl	ication of Energ	y Audit		8 nours		
Energy audit ap	opilea to building	s: Energy saving measures in new of	undings, water au	an, method		
Domond side n	energy savings u	ps applicable to new as well as existence of DSM evolution of DSM	ing buildings.	onning and		
implementation	lanagement: Sco	t as a DSM stratagy applications of	load control and			
implementation, load management as a DSM strategy, applications of load control, end use energy conservation, tariff options for DSM						
Course Outcomes: At the end of the course the student will be able to:						
22EEE653.1	Analyze about e	energy scenario nationwide and worl t and its features.	ldwide, also outl	ine energy		
22EEE653.2	Discuss load ma	anagement techniques and energy ef	ficiency.			
22EEE653.3	Explain the nee	ed of energy audit and energy audit r	nethodology.			
22EEE653.4	Draw the energy	v flow diagram of an industry				
22EEE653.5	Conduct energy	audit of electrical systems and build	lings			

22EEE653.6 Illustrate demand side management and energy conservation.

Teaching Hou	urs/Week (L:T:P)	3:0:0	SEE Hours	03		
Total Hours		40 Hours	Credits	03		
Course Lear	ning Objectives: T	he objective of the course is to				
 Discuss the objectives: The objective of the course is to Discuss the objectives of safety and security measures, hazards associated with electric current and voltage. Discuss the electrical safety measures in residential, commercial and agricultural installations. Understand the preliminary preparations, safe sequence and risk of plant and equipment. Analyze the hazardous zones and electrical safety in the hazardous areas. Understand the application of fire extinguishers. Module-1 Fundamentals and Safety Measures in Electrical Systems 8 hours Terms and definitions, objectives of safety and security measures, hazards associated with electric current and voltage, who is exposed, principles of electrical safety, approaches to prevent accidents. Primary and secondary electrical shocks, possibilities of getting electrical shock and its severity, medical analysis of electric shocks and its effects, shocks due to flash/ spark over's, prevention of shocks, safety precautions against contact shocks, flash shocks, burns, residential buildings and shop. Module-2 Safety in Domestic and Agricultural settings 8 hours Wiring and fitting domestic appliances, water tap giving shock from wet wall fan firing shock multistories agricultural pump installation do's and don'ts for safety in setallations. 						
Module-3 Safe	etv Procedures and	Precautions in Plant Operations		8 hours		
Preliminary pro	eparations – safe seq	uence –risk of plant and equipment -	-safety document	ation –field		
quality and sat	fety -personal prote	ctive equipment -safety clearance	notice –safety pr	ecautions –		
safeguards for	operators -safety.					
Module-4 Elec	ctrical Equipment	for Hazardous Zones		8 hours		
Hazardous zon	nes -class 0, 1 and	d 2 – spark, flashovers and coror	a discharge and	functional		
requirements	 specifications o 	f electrical plants, equipment's	for hazardous l	ocations –		
classification of	of equipment enclos	sure for various hazardous gases and	d vapours – class	sification of		
equipment/enc	losure for hazardou	s locations.				
Module-5 Fir	e Safety Fundame	ntals and Systems		8 hours		
Fundamentals	of fire-initiation of f	fires, types; extinguishing technique	s, prevention of f	ire, types of		
fire extinguishers, fire detection and alarm system; CO ₂ and Halogen gas schemes; foam schemes.						
Course Outcomes: At the end of the course the student will be able to:						
22EEE654.1	shock hazards	t of electric snocks and preventive m	leasures to overco			
22EEE654.2	22EEE654.2 Outline the electrical safety during installation, testing and commissioning procedure.					
22EEE654.3	Classify hazardou	s zones based on IEC standards.				
22EEE654.4	E654.4 Distinguish various fire extinguishers and their classification.					

	Distinguish various fire entinguishers and their etassification.							
22EEE654.5	Analyze electrical safety measures in residential, commercial, agriculture areas.							
22EEE654.6	Examine the various types of enclosures and protective equipments used in hazardous locations.

Major Project Phase I						
Course Code	22EEE66	CIE Marks	100			
Course Type	Due et e el	SEE Marks	-			
(Theory/Practical/Integrated)	Practical	Total Marks	100			
Teaching Hours/Week (L:T:P)	0:0:4	SEE	-			
Total Hours	48 hours	Credits	02			
Course Learning Objectives:						

Course Learning Objectives:

- 1. Utilize fundamental principles of engineering and interdisciplinary knowledge to identify, analyse, and solve complex problems in the project domain.
- 2. Develop and execute a comprehensive project plan that includes designing, prototyping, testing, and evaluating a system, component, or process to meet specific needs and constraints.
- 3. Conduct in-depth research, critically review literature, and integrate innovative solutions or techniques within the project framework.
- 4. Demonstrate effective teamwork, communication, and collaboration skills in a multidisciplinary environment to achieve project objectives.
- 5. Incorporate ethical considerations, societal impact, and sustainable practices in the project development, while adhering to professional engineering standards.
- 6. Prepare and present a well-structured project report, supported by technical documentation and visual aids, and confidently defend the work during project viva-voce or presentations.

1. Project Selection

- **Relevance**: Projects should align with the students' specialization and current industry trends.
- **Innovation**: Projects that offer innovative solutions to existing problems or explore new ideas are encouraged.
- **Feasibility**: The project should be achievable within the given timeframe and resources.
- **Team Composition**: Students can work in teams, typically comprising maximum 4 members.

2. Project Proposal

- **Submission**: Students must submit a detailed project proposal (project synopsis) outlining the problem statement, objectives, methodology, expected outcomes, and a work plan.
- **Approval**: The proposal should be reviewed and approved by the Department Project Evaluation Committee (DPEC).

3. Project Execution

- **Regular Meetings**: Students should meet regularly with their project-guide to discuss progress, challenges, and next steps.
- **Documentation**: Maintain detailed documentation throughout the project in a project workdairy, including design decisions, experiments, and testing results.
- **Milestones**: Set clear milestones and deadlines to ensure steady progress. These could include design completion, initial prototype, testing, etc.

4. Mid-term Review

- **Progress Presentation**: DPEC shall conduct a mid-term review where students present their progress to a panel of faculty members.
- Feedback: Provide constructive feedback and guidance to help students refine their projects.

5. Report Submission

- **Report**: The project report should include an abstract, introduction, literature review, methodology, completed portion of the project work with the available results, discussion, conclusion, and references.
- Code and Data: If applicable, students should submit their code, datasets, and any other relevant materials.

6. Project Presentations

• **Oral Presentation**: Students should present their projects to a panel, explaining their work, findings, and contributions.

- **Demonstration**: If possible, include a live demonstration of the project or show relevant • simulations and results.
- **Q&A**: Be prepared to answer questions from the panel and justify the project's methodology and conclusions.

7. Evaluation Criteria

- Originality and Innovation: Assess the novelty and creativity of the project. •
- **Technical Competence**: Evaluate the depth of technical knowledge and problem-solving ability • demonstrated.
- **Project Execution**: Consider the effectiveness of project planning, adherence to timelines, and • quality of implementation.
- Presentation and Communication: Judge the clarity and coherence of the project report, • presentation, and the ability to answer questions.

8. Plagiarism Check

- Academic Integrity: Ensure that the work submitted is original and properly cites all references • and sources.
- Plagiarism Check: Run all reports through plagiarism detection software and ensure that • similarity index is less than the threshold value (25%).

9. Mentorship and Feedback

- Feedback: Students are required to consult with their project guide regularly throughout the • project work to seek guidance and feedback.
- Weekly Meetings: At least one mentorship meeting every week shall be held and recorded in the project work-dairy.

Continuous Internal Evaluation (CIE)						
Description	Proposed Dates	CIE Weightage				
Description	rioposed Dates	(Max 100 marks)				
1. Project Synopsis Evaluation	Beginning of the 6 th Semester	20 marks				
2. Project Progress Evaluation	Middle of the 6 th Semester	30 marks				
3. Project Report Evaluation	End of the 6 th Semaster	50 marks				
(Phase I)						
Marks given for the Project Report shall be the same for all project team members, However,						
marks may differ for presentations and viva-voce depending upon the individual student						

performance.

Semester End Examinations (SEE)

4. There is No SEE component for Major Project Phase I.

Course Outcome	Course Outcomes: At the end of the course the student will be able to :								
22EEE66.1	Demonstrate the ability to identify, define, and solve complex engineering problems								
	using appropriate methodologies and modern tools.								
22EEE66.2	Successfully design, develop, and test an engineering solution that meets specified requirements, addressing technical, economic, environmental, and social constraints.								
22EEE66.3	Apply research skills to review existing literature, gather and analyze data, and incorporate innovative or state-of-the-art technologies in the project								
22EEE66.4	Collaborate effectively within a team, taking on leadership or supportive roles as needed, while ensuring clear communication and efficient project management.								
22EEE66.5	Demonstrate awareness of professional ethics, societal impact, and sustainability in the design and implementation of engineering solutions.								

22EEE66.6 Exhibit strong written and oral communication skills by preparing technical reports, project documentation, and delivering persuasive project presentations.

Environmental Studies											
Course Code	22CIV67	CIE Marks	50								
Course Type	Theory	SEE Marks	50								
(Theory/Practical/Integrated)	Theory	Total Marks	100								
Teaching Hours/Week (L:T:P)	1:0:0	SEE	2 Hours								
Total Hours	15 hours	Credits	01								

Course Learning Objectives: This course will enable

- To create environmental awareness among the students.
- To gain knowledge on different types of pollution in the environment.

Module-1 Introduction to Ecology (3 hours)

Ecosystems (Structure and Function): Forest, Desert, Wetlands, River, Oceanic, and Lake. Biodiversity: Types, Value; Hot spots; Threats and Conservation of Biodiversity, Forest Wealth, and Deforestation.

Module-2 Energy Systems and Natural Resources (3 hours)

Advances in Energy Systems (Merits, Demerits, Global Status, and Applications): Hydrogen, Solar, OTEC, Tidal, and Wind.

Natural Resource Management (Concept and case studies): Disaster Management, Sustainable Mining, case studies, and Carbon Trading.

Module-3 Environmental Pollution and Public Health (3 hours)

Environmental Pollution (Sources, Impacts, Corrective and Preventive measures, Relevant Environmental Acts, Case-studies): Surface and Ground Water Pollution; Noise pollution; Soil Pollution, and Air Pollution.

Waste Management & Public Health Aspects: Bio-medical Wastes; Solid waste; Hazardous wastes; E-wastes; Industrial and Municipal Sludge.

Module-4 Environmental Concerns (3 hours)

Global Environmental Concerns (Concept, policies, and case studies): Groundwater depletion/recharging, Climate Change; Acid Rain; Ozone Depletion; Radon and Fluoride problems in drinking water; Resettlement and rehabilitation of people, Environmental Toxicology.

Module-5 Environmental Management (3 hours)

Latest Developments in Environmental Pollution Mitigation Tools (Concept and Applications): G.I.S. & Remote Sensing, Environment Impact Assessment, Environmental Management Systems, ISO14001; Environmental Stewardship- NGOs. Fieldwork: A visit to an Environmental Engineering Laboratory or Green Building or Water Treatment Plant or Waste water treatment Plant; thought to be Followed by an understanding of the process and its brief documentation (Optional).

Course Outcome	Course Outcomes: At the end of the course the student will be able to:									
22CIV67.1	Identify the principles of ecology and environmental issues that apply to air, land, and water issues on a global scale,									
22CIV67.2	Develop critical thinking and/or observation skills and apply them to the analysis of a problem or question related to the environment.									
22CIV67.3	Demonstrate ecology knowledge of a complex relationship between a biotic and abiotic component.									
22CIV67.4	Apply their ecological knowledge to illustrate and graph a problem and describe the realities that managers face when dealing with complex issues.									
22CIV67.5	Address problems related to waste management and public health aspects									
22CIV67.6	List the Standards and latest tools to mitigate pollution.

Inne	Innovation and Intellectual Property											
Course Code	22IIP68	CIE Marks	100									
Course Type	Prostical	SEE Marks	-									
(Theory/Practical/Integrated)	Practical	Total Marks	100									
Teaching Hours/Week (L:T:P)	0:0:2	Exam Hours	3 Hours									
Total Hours	20 Hrs	Credits	01									

Course Learning Objectives:

- 1. Learn how to use online databases and search tools for conducting patent searches.
- 2. Develop skills in analyzing patent documents and identifying relevant prior art.
- 3. Gain proficiency in evaluating the patentability criteria for engineering inventions.
- 4. Understand the principles of technology gap analysis and patentability search.
- 5. Understand the patent drafting and patent prosecution.

Module-1 Basics of Intellectual Property Rights (4 Hours)

Creativity, Invention, and Innovation – Introduction to Intellectual Property Rights-types and Importance – Overview of Patent Law – Intellectual Property Management and Commercialization – Emerging Issues in Intellectual Property – Case Studies and Practical Examples – Ethical and Social Considerations.

Activity: Trademark Design Challenge – IP Case Study Analysis

Module-2 Patent Landscape Analysis – Technology Gap Analysis (4 Hours)

Overview of Patent Databases and Search Tools – Keyword Searching, Classification Searching, and Citation Searching – Methods for Analyzing Patent Data: Patent Counts, Citation Analysis, and Patent Mapping – Technology Gap Analysis – Patent Portfolios – Portfolio Strength Assessment – Identification of Key Players – Competitive Intelligence and Market Analysis.

Activity: Conduct Patent Landscape Analysis for the Proposed Capstone Project.

Module-3 Patentability Assessment (6 Hours)

Significance of Patentability Assessment – Patentability Criteria: Novelty, Non-obviousness (Inventive Step), and Industrial Applicability/Utility – Prior Art Searching and Analysis (Keyword Searching, Classification Searching, and Citation Searching) – Non-Patent Literature Search and Other sources of Prior Art – Patentability Reports and Assessments – Case Studies and Practical Examples.

Activity: Conduct a Patentability Search for the Proposed Capstone Project.

Module-4 Patent Drafting and Prosecution (6 Hours)

Significance of Patent Drafting and Prosecution – Structure and Components of a Patent Application – Drafting of Patent Specifications, Claims, and Drawings – Overview of Patent Prosecution Process

Activity: Prepare a Patent Draft for the Proposed Capstone Project.

Course Out	comes: At the end of the course, the student will be able to:
22IIP68.1	Demonstrate proficiency in utilizing various online databases and search tools for conducting patent searches
22IIP68.2	Develop advanced skills in analyzing patent documents to identify relevant prior art, including patents, patent applications, and non-patent literature.
22IIP68.3	Demonstrate a comprehensive understanding of the patentability criteria, including novelty, non-obviousness, and utility.
22IIP68.4	Explain the principles and methodologies of technology gap analysis and its relevance to patentability searches.
22IIP68.5	Gain insight into the patent drafting process, including the structure and components of patent applications, and patent prosecution.
22IIP68.6	Apply the acquired knowledge and skills in conducting practical activities, such as conducting patent landscape analysis, patentability searches, and drafting patent

applications, to solve real-world problems and challenges in the field of intellectual property rights.

Core Values of the Institution

SERVICE

A Josephite will keep service as the prime goal in everything that is undertaken. Meeting the needs of the stakeholders will be the prime focus of all our endeavors.

EXCELLENCE

A Josephite will not only endeavor to serve, but serve with excellence. Preparing rigorously to excel in whatever we do will be our hallmark.

ACCOUNTABILITY

Every member of the SJEC Family will be guided to deliver on assurances given within the constraints set. A Josephite will always keep budgets and deadlines in mind when delivering a service.

CONTINUOUS ADAPTATION

Every member of the SJEC Family will strive to provide reliable and continuous service by adapting to the changing environment.

COLLABORATION

A Josephite will always seek to collaborate with others and be a team-player in the service of the stakeholders.

Objectives

- Provide Quality Technical Education facilities to every student admitted to the College and facilitate the development of all round personality of the students.
- Provide most competent staff and excellent support facilities like laboratory, library and internet required for good education on a continuous basis.
- Encourage organizing and participation of staff and students in in-house and outside Training programmes, seminars, conferences and workshops on continuous basis.
- Provide incentives and encouragement to motivate staff and students to actively involve in research-innovative projects in collaboration with industry and R&D centres on continuous basis
- Invite more and more number of persons from industry from India and abroad for collaboration and promote Industry-Institute Partnership.
- Encourage consultancy and testing and respond to the needs of the immediate neighbourhood.
